

About Newport Water...

The original water works in Newport was started in 1876. The Newport Water Works Company was incorporated in 1881, and was succeeded by the Newport Water Corporation in 1929. Since 1936, the City of Newport has owned and operated the system. The Newport Water Division is a division within the City of Newport's Utilities Department and is responsible for the operation and maintenance of the system. Newport Water operates as an enterprise fund and is independent of the overall City budget. Newport Water is licensed by the RI Department of Health as a Public Water Supplier No. 1592010. Newport Water is regulated by the Rhode Island Public Utilities Commission.

Newport's Water Supply

Newport Water draws its raw water supply from a system of nine surface reservoirs: North and South Easton Pond, Paradise Pond, Gardiner Pond, St. Mary's Pond, Sisson Pond, Lawton Valley Reservoir, Nonquit Pond, and Watson Reservoir. These reservoir systems are located in a basin area totaling 18.625 square miles or 11,920 acres of rural, forested and some developed lands. The reservoirs located in Newport, Middletown, Portsmouth, Tiverton, and Little Compton are interconnected through a complex network of pipelines and pumping stations. Newport Water has purchased 350 acres of conservation easements to protect raw water quality of the reservoirs.

The water is treated at either Station 1 Plant in Newport or the Lawton Valley Plant in Portsmouth. The combined design capacity of the plants is 16 million gallons of treated water per day.

Newport's Distribution System

Newport Water's distribution system consists of water mains of various size, material and age which carry water throughout Newport, Middletown and a portion of Portsmouth to each individual customer. In addition, Newport Water provides water wholesale to the Portsmouth Water and Fire District and the U.S. Navy for distribution within their systems. Newport Water maintains within our system approximately 14,700 services, 170 miles of water main, 3,300 valves and 1,000 hydrants.

REPORT

This report contains important information about your drinking water. We recommend all our customers review the information or, if necessary, have someone translate it for you.

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, o hable con alguien que lo entienda.

Este relatório contém informação importante sobre a qualidade da água na sua comunidade. Pergunta a quem saiba traduzir ou fala com alguém que compreenda o que está escrito.

Detected Contaminants Table

This table shows the results of our combined water-quality analyses for both Station 1 - Newport and Lawton Valley - Portsmouth systems from Jan. 1, through Dec. 31, 2011. Every regulated contaminant that we detected in the water, even in the most minute traces, is listed here along with the highest levels allowed by regulation (MCL), the ideal goals for public health, the amounts detected, the usual sources of such contamination, footnotes explaining our findings and a key to units of measurement.

<i>Microbiological Contaminants</i>	<i>Period</i>	<i>Unit</i>	<i>MCL</i>	<i>SMCL</i>	<i>MCLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Turbidity ①	2011	NTU	TT		n/a	0.48	97.85%	Soil runoff	No
Total Organic Carbon	2011	removal ratio	TT		n/a	1.09	0.60 - 1.90	Naturally present in environment	No
<i>Radioactive Contaminants</i>	<i>Period</i>	<i>Unit</i>	<i>MCL</i>		<i>MCLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Combined Radium ⑤	2008	pCi/l	5		0	2.00	ND - 2.00	Erosion of natural deposits.	No
<i>Inorganic Contaminants</i>	<i>Period</i>	<i>Unit</i>	<i>MCL</i>		<i>MCLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Arsenic ⑤	2011	ppb	10		0	2	ND - 2	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes.	No
Barium ⑤	2011	ppm	2		2	0.015	0.005 - 0.015	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	No
Chromium ⑤	2011	ppb	100		100	2	ND - 2	Discharge from steel and pulp mills; erosion from natural deposits.	No
Copper ②	2010	ppm	AL=1.3		1.3	0.05	0	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives.	No
Fluoride ③	2011	ppm	4	2	4	1.15	0.11 - 1.15	Water additive which promotes strong teeth	No
Lead ②	2010	ppb	AL=15		0	5	0	Corrosion of household plumbing systems; erosion of natural deposits.	No
Nitrate ⑤	2011	ppm	10		10	1.36	ND - 1.36	Runoff from fertilizer use; leaching from septic tanks; sewage; erosion of natural deposits.	No
Nitrite ⑤	2011	ppm	1		1	0.22	ND - 0.22	Runoff from fertilizer use; leaching from septic tanks; sewage; erosion of natural deposits.	No
<i>Synthetic Organic Contaminants Including Pesticides and Herbicides</i>	<i>Period</i>	<i>Unit</i>	<i>MCL</i>		<i>MCLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Atrazine ⑤	2011	ppb	3		3	0.11	ND - 0.11	Runoff from herbicide used on row crops	No
Benzo(a)pyrene ⑤	2011	ppt	200		0	100	ND - 100	Leaching from linings of water storage tanks and distribution lines	No
Di(2-ethylhexyl)adipate ⑤	2011	ppb	400		400	1.00	ND - 1.00	Discharge from chemical factories	No
Simazine ⑤	2010	ppb	4		4	0.19	ND - 0.19	Herbicide runoff	No
<i>Disinfection By-products</i>	<i>Period</i>	<i>Unit</i>	<i>MCL</i>		<i>MCLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Total Trihalomethanes (TTHM) ④	2011	ppb	80		n/a	76.74	28.30 - 140.00	By-product of drinking water chlorination	No
Haloacetic Acid 5	2011	ppb	60		n/a	30.80	17.90 - 46.00	By-product of drinking water chlorination	No
Chlorite	2011	ppm	1		0.800	0.693	0.150 - 0.693	By-product of drinking water disinfection	No
<i>Disinfectants</i>	<i>Period</i>	<i>Unit</i>	<i>MRDL</i>		<i>MRDLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Chlorine	2011	ppm	4		4	0.92	0.07 - 2.80	Water additive used to control microbes	No
Chlorine Dioxide	2011	ppb	800		800	780	50 - 780	Water additive used to control microbes	No
<i>Unregulated Contaminant Monitoring</i>	<i>Period</i>	<i>Unit</i>	<i>MCL</i>		<i>MCLG</i>	<i>Detected Level</i>	<i>Range</i>	<i>Major Sources</i>	<i>SDWA Violation</i>
Sodium	2011	ppm	n/a		n/a	60.20	22.20 - 60.20	Naturally occurring; road runoff; contained in water treatment chemicals; EPA regulations require us to monitor this contaminant while EPA considers setting a limit on it.	No
Metolachlor ⑤⑥	2011	ppb	n/a		n/a	0.30	ND - 0.30	Used as an herbicide for weed control on agricultural crops	n/a

Water Quality Table Footnotes:

① 0.48 NTU was the highest single turbidity measurement recorded. The lowest monthly percentage of samples meeting the turbidity limit was 97.85%. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration.

② Detected level indicates the 90th percentile value of the 30 samples taken. The Range indicates the number of samples above the action level.

③ Newport Water adds fluoride to its treated water as an aid in dental cavity prevention in young children.

④ Some people who drink water containing TTHM's in excess of the MCL over many years may experience problems with their liver, kidneys or central nervous system and may have an increased risk of contracting cancer. Detected level is based on the highest four-quarter average.

⑤ Sampled and monitored at raw water supply reservoirs prior to treatment.

⑥ The EPA requires us to report this contaminant which is on the Contaminant Candidate List 3.

Definitions and Key to Table

MCL - Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.

MCLG - Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's allow for a margin of safety.

MRDL - Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of disinfectant is necessary for control of microbial contaminants.

MRDLG - Maximum Residual Disinfectant Level Goal: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLG's do not reflect the benefits of the use of disinfectants to control microbial contamination.

AL - Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirement that a water system must follow.

TT - Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.

NTU	= Nephelometric Turbidity Units
ppm	= parts per million, or milligrams per liter (mg/l)
ppb	= parts per billion, or micrograms per liter (ug/l)
ppt	= parts per trillion, or nanograms per liter
n/a	= Not applicable
ND	= No Detect

The data presented in this report is from the most recent testing done in accordance with regulations. The RI Department of Health (RIDOH) allows Newport Water to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

Source Water Assessments

In 2003, the University of Rhode Island, in cooperation with RIDOH and other state and federal agencies, assessed the threats to Newport Water's water supply sources. The assessment considered the intensity of development, the presence of businesses and facilities that use, store or generate potential contaminants, how easily contaminants may move through the watersheds, and the sampling history of the water.

The assessment found that our water sources on Aquidneck Island and in Little Compton and Tiverton are moderately susceptible to contamination. Monitoring and protection efforts are especially important to assure continued water quality. Newport Water updated the 2003 Assessment in 2010. The complete Source Water Assessment Report is available at our office at 70 Halsey Street.

Source Water Monitoring

In 2011, at the direction of the RIDOH and RIDEM, Newport Water began a two year source water monitoring program for the nine surface water reservoirs. The purpose of the monitoring is to improve how these water resources are monitored and managed. The data collected will be used to assess water quality of the reservoirs as it relates to both drinking water sources and aquatic life designated uses.

The first year (2011) of the program included bi-weekly monitoring of the nine surface reservoirs during months when the water is typically warmest (April through November). The results of first year monitoring indicate that:

- Blue-green algae, also referred to as *Cyanobacteria*, did not cause immediate concern at the time of monitoring. However, *Cyanobacteria* have the potential to form the naturally occurring algal toxins, Microcystin and Anatoxin; and
- Each of the nine reservoirs exhibit elevated concentrations of phosphorous, algae, and bacteria.

Newport Water will be working with the state agencies and the communities in which the watersheds are located to identify land uses that may be contributing to

the impairments. Through source water monitoring, identifying pollution impairments and the appropriate combination of treatment techniques, we can develop plans to mitigate sources of pollution and optimize finished water quality. The 2nd year of the monitoring program will begin in May 2012.

Cross- Connection Control Plan

Cross- Connections between public water supplies and non-potable sources of contamination can represent one of the most significant threats to health in the water supply industry. A cross connection control program protects the public water supply from the possibility of contamination or pollution through backflow or back-siphonage into the public water system from a building's internal plumbing system. The Federal Safe Drinking Water Act requires that the water supplier has the primary responsibility for preventing water from unapproved sources from entering the public potable water system. Newport Water adopted a Cross-Connection Control Plan in March 2010.

Improvements to the Water Treatment Plants

On January 25, 2012, the City Council awarded the Design Build contract for the construction of a new Lawton Valley Plant and improvements to the Station 1 Plant. The contract valued at \$67 million was awarded to AECOM/CH Nickerson Joint Venture. Due to the challenging water quality of our reservoirs, Advanced Water Treatment processes are incorporated into the improvements at each facility in order to assure future compliance with drinking water standards. The improvements are scheduled to be completed and operational by December 2014. Funding for this project will be provided through subsidized loans from the Drinking Water State Revolving Fund.

Conservation Kits

Newport Water has a limited number of water conservation kits available free, one per service account.

To request a Conservation Kit, please contact Newport Water by email at: utilitybilling@cityofnewport.com.

Newport Water Annual Water Quality Report

Newport Water is pleased to present this water quality report for 2011 to our customers. In accordance with the Safe Drinking Water Act all water utilities are required to issue an annual Consumer Confidence Report to promote customer awareness of the quality of their drinking water. This brochure is a snapshot of the water quality from January through December 2011. Included are details about where your water comes from, what it contains, and how it compares to EPA standards. In 2011, Newport Water conducted 13,490 analyses to monitor approximately 84 drinking water contaminants. The following table indicates only the contaminants that were detected, even if the detected level was below the maximum level set by the EPA. For the year 2011, our system had no violations. Please know that the employees of Newport Water are committed to providing you water that meets all EPA and state drinking water standards.

If you have any questions please contact:

Julia A. Fogue, Dir. of Utilities (401) 845-5600
US EPA Hotline (800) 426-4791
RI Department of Health, Drinking
Water Quality (401) 222-6867

How can you be involved?

Meetings of the Newport City Council begin at 6:30 PM on the second and fourth Wednesday of each month in the Council Chambers, City Hall, 43 Broadway, Newport, RI.

Additional Health Information

To ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health risk and effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and radioactive material and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- (A) Microbial contaminants, such as viruses and bacteria, which may come from septic systems, agricultural livestock operations and wildlife.
- (B) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm runoff; oil and gas production, mining or farming.
- (C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm runoff, and residential uses.
- (D) Organic chemical contaminants, including synthetic and volatile organics, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff and septic systems.
- (E) Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, persons who have HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Concerning Lead in Our Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Newport Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (800-426-4791) or at www.epa.gov/safewater/lead.

Newport Water requests your help in protecting our drinking water supplies. Please do not litter on Water Division property. Also, please remember to pick up after dogs and dispose of in the proper receptacle.
