# **Executive Summary**

# **SS4A Overview**

Safety has been a serious concern for all people travelling in Rhode Island. Through the Federal Highway Administration (FHWA) Safe Streets for All (SS4A) Program, the Rhode Island Public Transit Authority (RIPTA) secured funding in 2022 to support the state and participating municipalities in planning infrastructure improvements that will prevent serious injuries and save lives. With the SS4A grant award and other statewide efforts through the Rhode Island Division of Statewide Planning and the Rhode Island Department of Transportation (RIDOT), the state has been focusing on improving safety on all roadways.

The City of Newport created this municipal SAP to effectively implement a tangible version of the Safe Streets for All mission, guided by the Safe Systems Approach. The plan encompasses shifting safety needs, known and emerging areas of safety improvement, and identification of priority projects and will help the City of Newport position for further federal implementation funding.

This SAP includes a three-tier safety analysis to understand the current state of road safety in each community, identify high risk areas, and develop a predictive view of potential crash sites. However, data do not always tell the full story. Through community events and hosted pop-ups in the City of Newport, the public could engage in discussion, learn more about the SS4A Program, and were encouraged to participate in an SS4A Safety Survey.

Through the SS4A Program, the City of Newport, together with other participating municipalities and agencies, received continued opportunity to make improvements to the transportation system that will prevent injuries and save lives. In 2022, USDOT awarded RIPTA SS4A funding to develop comprehensive Safety Action Plans. Although this Safety Action Plan was part of the umbrella program, the City of Newport received a tailored Plan with comprehensive analysis, public engagement, high-risk area identification, and safety improvement recommendations. RIPTA's statewide plan outlines broader safety concerns and goals across Rhode Island.

The overarching process for developing the municipal Safety Action Plans includes these general items and schedule:

- Discuss community goals (from April to May 2024)
- Collect community input (from June to September 2024)
- Develop community Safety Action Plans (from July 2024 to March 2025), including:
  - o Safety analysis (Baseline Crash Analysis, High-Risk Network, High Injury Network)
  - Policy discussion
  - Identification of priority locations/projects

# **Project Components**

# **Safety Analysis**

The safety analysis uses data to identify key crash patterns and trends and the contributing factors that have led to fatal and serious injury crashes in the project area. This analysis is based on 5 years of crash data (from 2019 to 2023), collected by enforcement agencies using the State of Rhode Island Uniform Crash Report form, combined with roadway and land use data. Together, this information identifies the

City of Newport vii

types of infrastructure, behavior, and contexts that have the greatest impact on safety performance. Safety analyses inform policy, infrastructure, and programming improvements for all modes of travel.

# **Engagement**

Stakeholder engagement and collaboration ensure that the plan includes diverse perspectives and insights, identifies risks not apparent in the data, and provides concurrence for solutions. Engagement was held early and at key points throughout the process to gather input from stakeholders and the public as part of the decision-making process.

# **Safety Action Plan**

An action plan outlines the specific steps and strategies to address the safety challenges and goals in Newport. Recommended activities, such as safety-focused processes, new infrastructure, or policy changes, are articulated to meet the plan's goals and objectives. Responsible agencies or individuals to coordinate on each activity are identified. Finally, benchmarks or metrics are also generated to provide a way for the city to target projects, timelines, and progress. These benchmarks and metrics also provide an important data point for maintaining the progress and transparency of implementation efforts. This Safety Action Plan is structured around the standard SS4A Action Plan Components (DOT 2022), listed below:

- Leadership Commitment and Goal Setting
- Planning Structure
- Safety Analysis
- Engagement and Collaboration
- Equity Considerations
- Policy and Process Changes
- Strategy and Project Selections
- Progress and Transparency

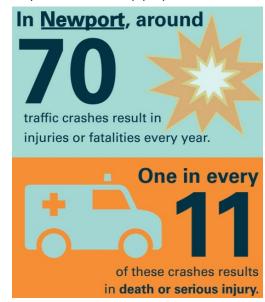

# **Future Grant Opportunities**

By prioritizing analysis, engagement, and action planning, the Safety Action Plans help prepare

municipalities to submit grant proposals. This will support ongoing implementation and construction efforts, enhancing community safety, addressing areas of concern, and establishing infrastructure for healthier, happier communities.

# **Key Safety Action Plan Findings**

Newport is committed to eliminating traffic deaths and serious injuries on the city's streets by 2034. This Safety Action Plan is the roadmap to that goal. This plan was crafted through comprehensive safety analyses and community engagement activities, which found that:

City of Newport viii

# **Safety Analysis**

- Compared to people in vehicles, people walking, bicycling, or riding a motorcycle were much more likely to be injured or killed when crashes occurred.
- Peak tourist season in Newport, July and August, saw the highest numbers of crashes.
- State roads accounted for 67 percent of crashes resulting in an injury or fatality, even though they make up 10 percent of total roadway mileage.

# **Community Engagement**

- Survey respondents expressed that they are looking for change on Newport's roadways.
- The community expressed a desire to implement expanded and improved pedestrian and bicyclist infrastructure, particularly in high pedestrian areas.
- Local leaders and activists elevated the importance of developing a Safe Routes to School program to ensure children and families can travel safely to and from school.

# **Key Safety Action Plan Outcomes**

To achieve zero traffic deaths and serious injuries by 2034, the City of Newport identified the four core strategy categories listed below. Each strategy contains numerous actions to advance policy changes, infrastructure projects, and new processes to build a safer Newport.

- Adopt a Regional Approach to Support Safer Streets
- Increase Roadway Safety and Slow Speeds
- Increase Community Commitment to Vision Zero
- Manage Post-Crash Care and Data Transparency

City of Newport ix

# Introduction

# **Meeting the Challenge**

Safety is a serious concern for people traveling in Rhode Island. Through the U.S. Department of Transportation (DOT), the Safe Streets and Roads for All (SS4A) Program provides funding for communities to plan and implement projects that will prevent injuries and save lives. In 2023, Rhode Island and 31 participating municipalities, including the City of Newport, were awarded SS4A funding to develop comprehensive Safety Action Plans.

This Safety Action Plan outlines strategies to enhance roadway safety, reduce fatalities, and prevent serious injuries for drivers, pedestrians, cyclists, and public transit users in the City of Newport. Newport intends to use this Safety Action Plan to apply for implementation grants under the SS4A Program and other grants available such as those through the Federal Highway Administration (FHWA).

This Safety Action Plan includes a Baseline Crash Analysis (BCA), which evaluates overall crash patterns and assesses hot spots where crashes have occurred. It also includes a systemic safety analysis (FHWA 2013), which identifies common risk factors that contribute to crashes across the entire transportation network. This combined approach, based on recent crash history and systemic risk factors, allows the City of Newport to identify the high-injury network and develop effective, context-specific solutions. Combining these two approaches also enables the City of Newport to balance reactive measures that address locations where crashes are occurring with proactive measures that address areas of risk during future project implementation. This Safety Action Plan is structured around the standard SS4A Action Plan Components (DOT 2022), listed below:

- Leadership Commitment and Goal Setting
- Planning Structure
- Safety Analysis
- Engagement and Collaboration
- Equity Considerations
- Policy and Process Changes
- Strategy and Project Selections
- Progress and Transparency

The Safety Action Plan details strategies that advance SS4A goals to eliminate fatal and serious injury crashes. The Safety Action Plan includes individual projects, safety countermeasure opportunities, and recommended policy changes to address safety and mobility challenges in a fair and sustainable way.

# Safe System Approach

The Safe System Approach has been adopted by the transportation community to identify and reduce risks found in the transportation system (DOT 2025). This approach focuses on evaluating human mistakes and vulnerability in addition to crash analysis to create a comprehensive plan to improve safety.

All materials and project guidelines in this Safety Action Plan prioritize the Safe System Approach (Figure 1). The Safe System Approach anticipates human mistakes and proactively designs infrastructure to reduce the risk of those mistakes occurring and to reduce the injury severity when a mistake does occur.

Figure 1. Principles and Objectives of a Safe System Approach

# **Principles of a Safe System Approach**

Death and Serious Injuries are Unacceptable. The approach focuses on elimination of crashes that result in serious injury or death.

Humans Make Mistakes. People will unfortunately make mistakes or choices that lead to crashes of all types. This approach tries to anticipate the mistakes/choices that may be made to limit the number of serious crashes.

Humans Are Vulnerable. Human bodies have a threshold of injury during a crash before it results in death. It is of paramount importance to create a transportation system that accounts for human vulnerabilities in its design.

**Responsibility is Shared**. All stakeholders are vital to mitigating crash fatalities and injuries.

Safety is Proactive. Proactive tools should be used to identify and address safety issues in the transportation system, rather than waiting for crashes to occur and reacting afterwards.

Redundancy is Crucial. Reducing risks requires that all aspects of transportation have an opportunity for improvement.

The Safe System Approach provides a framework for identifying and prioritizing projects, and was used to ensure this Safety Action Plan:

- Addresses the causes and context for fatal and serious injury crashes throughout the community.
- Prioritizes systemic change over individual behavioral change.
- Prioritizes system-wide risk mitigation over the causes of individual crashes.

City of Newport χi

By integrating these factors into this Safety Action Plan's recommendations and priorities, the City of Newport will achieve a balance between reactive strategies that tackle issues leading to fatal and serious injury crashes, and proactive strategies that address system risks before such crashes occur.

The balance between these approaches is also present through the Baseline Crash Analysis, which identifies high-level patterns for fatal and serious injury crashes that have occurred, and the systemic safety analysis, which identifies risk factors that could lead to future fatal and serious injury crashes if left unaddressed.

# **How does the Safe System Approach interact with Complete Streets?**

Complete Streets are streets that prioritize safety, accessibility, convenience, and comfort for people walking, using a mobility device, riding a bicycle or scooter, taking transit, and driving, regardless of their age and ability.

The aim of Complete Streets aligns with the Safe System Approach. The City's Green and Complete Streets policy is a tool to implement more complete and safe streets, which will support safety goals.

### What is Vision Zero?

Vision Zero is a strategy to eliminate deaths and serious injuries from traffic crashes. First implemented in Sweden, cities and towns across the United States are putting Vision Zero into practice to save lives. By committing to this goal, communities orient multiple departments and initiatives around life-saving transportation solutions.

# **Municipal Background**

The City of Newport is a coastal island community of approximately 11 square miles, one-third of which is water. Located at the southern end of Aquidneck Island, it is surrounded by three major waterbodies — Narragansett Bay to the west, Sakonnet River to the east, and the Atlantic Ocean to the south. Newport connects to the mainland by the Claiborne Pell/Newport Bridge, which first connects to Jamestown, and by the two bridges in Portsmouth — the Mount Hope Bridge to Bristol and to Tiverton via the Sakonnet River Bridge.

Newport is one of three communities that comprises Aquidneck Island, including the Towns of Middletown and Portsmouth. Aquidneck Island is part of Rhode Island's East Bay, marked by historic architecture, ample natural resources, an active tourism and recreational economy, and popular open spaces and destinations such as Fort Adams and Benton Point State Parks, in Newport. The City's vibrant downtown, scenic Cliff Walk, world renowned historic mansions, and boating competitions make Newport a sought-after community and destination.

Newport is a community of about 25,000 residents (U.S. Census Bureau 2023a) and hosts millions of visitors annually (Rhode Island Commerce Corporation 2025). Newport's population is aging, with 21 percent of residents aged 65 or above, compared to the Rhode Island average of 18 percent. Newport also attracts families and young people; 15 percent of the population is under 18 years, slightly below the state average of 19 percent (U.S. Census Bureau 2023a).

City of Newport xii

Figure 2. Newport City Hall and an Accessible Crosswalk with Signs and Pedestrian-Scale Lighting

The city is home to the Newport County Campus of the Community College of Rhode Island and Salve Regina University, alongside one elementary school, one middle school, and one high school. In addition, Newport's Naval War College, located within the Naval Base, is the largest employer on the island and employs about 9,000 military and civilian personnel. The largest private employment sector is the service industry, making up more than 80 percent of private employment (City of Newport 2025).

The transportation system serving the people living, working, or visiting Newport has evolved over the centuries. At one time people got around on foot, horseback, horse drawn transportation, or water transportation. Today people largely get around by driving; according to the Census, 79 percent of people drive to work, either alone or with others. Still, 13 percent walk to work, and another 5 percent bicycle or take transit (U.S. Census Bureau 2023b). There is substantially complete sidewalk coverage in the older and denser areas of Newport, with gaps in the more spread-out areas to the south. There is limited bicycle infrastructure, including unprotected bike lanes, primarily on America's Cup Avenue and Memorial Boulevard and shared lane markings on other roadways. There are seven Rhode Island Public Transit Authority (RIPTA) bus routes that serve Newport.

Today, echoes of this historic infrastructure merge with echoes of a transportation system that molded itself around automobiles in the 20<sup>th</sup> century, presents transportation challenges, including safety. Past Newport plans have committed Newport to Vision Zero and built momentum for this effort. The *Keep Newport Moving Plan* (City of Newport 2023) recommended that Newport develop a Vision Zero Action Plan and advance Vision Zero principles to eliminate severe traffic crashes. Before that, in 2021, City Council voted to pass the *Green and Complete Streets Policy*, an important step toward ensuring that

City of Newport xiii

transportation projects are designed with consideration for all road users and the environment (City of Newport 2021).

Newport's *Strategic Plan* also placed an emphasis on transportation (City of Newport 2024). The plan highlights key recent wins that support transportation goals, including accelerated improvements to streets and sidewalks by doubling the repaving budget and securing state matching funds, and completed traffic calming improvements for Hillside Avenue. In the summer and fall of 2024, there was community support for increased action to improve roadway safety. In response, the City Council passed a number of resolutions acknowledging these concerns and directing the administration to explore solutions that include speed bumps, "speed sensitivity" alerts, crosswalks with "yield" signs, and speed monitoring. While some of the actions have been advanced, this plan offers a comprehensive look at transportation safety and concerns.

The time is now for a renewed and intentional focus on transportation safety in Newport.

Figure 3. Ghost bike honoring someone who died while bicycling on Aquidneck Island

White bikes called "ghost bikes" memorialize people killed in traffic crashes. Middletown resident Kayla Watson died on her bicycle after being hit by a large truck on Admiral Kalbfus Boulevard, in Newport, on October 11, 2023.

City of Newport xiv

Figure 4. "Dangerous Intersection" Sign on Marlborough Street in Newport

# An Island-wide Approach to Roadway Safety

At 5 miles wide by 15 miles long, Aquidneck Island is a compact and relatively flat island comprised of three municipalities and many destinations.

Out of all trips that begin and end on Aquidneck, 80 percent are 4 miles or less, and more than 50 percent are 2 miles or less.

This makes Aquidneck Island the perfect size and scale for an active, healthy, and sustainable lifestyle where walking and biking are viable options for short trips. This is especially important in the busy summer months when additional traffic can degrade the sense of community and connection that people love about the island.

Per *Ride Island*, an initiative led by Bike Newport and Grow Smart Rhode Island, the potential for active transportation on Aquidneck Island is unfortunately not realized today because there are very few places to safely ride a bike and few walkable neighborhoods.

Implementing the safety strategies in this plan can help give people more safe and comfortable choices for how they get around.

City of Newport xv

80% of all trips that begin and end on Aquidneck Island are less than 4 miles, which is easily bikable.

Figure 5. Key finding from the Ride Island Bike Plan, illustrating the potential for active transportation trips on Aquidneck Island

# **Municipal-State Coordination**

Coordination between municipalities and the state is an important part of successful implementation of road safety projects, particularly in areas where roadway networks include a mix of local and state jurisdiction. The singular focus of the municipality is contrasted with the need for the Rhode Island Department of Transportation (RIDOT) to consider systemwide improvements. RIDOT is aligned with the SS4A Program in both its current participation in developing the parallel Statewide Safety Action Plan and its recent development of roadway safety plans that advance Vision Zero, the underlying mission of SS4A.

The Strategic Highway Safety Plan (SHSP), Highway Safety Improvement Program (HSIP), Statewide Transportation Improvement Program (STIP), Bicycle Mobility Plan, and RI Vulnerable Road User (VRU) Safety Assessment, among other RIDOT plans, document the criteria and process involved in safety project prioritization, selection, and funding determination. The following language from the VRU Safety Assessment is an example:

RIDOT works with municipalities to identify and mitigate crash issues on locally maintained roadways. RIDOT has developed a process for local agencies to request a safety improvement with the intent for local agencies to perform the 'planning' step from the HSIP process. RIDOT will then determine if the improvement is eligible for HSIP funds and distribute the funds needed to the local agencies so they can administer the construction of the improvements.

In addition, the following language is in the most recent SHSP:

RIDOT is not eligible for (the SS4A) competitive grant program: however, RIDOT can support cities, towns, tribal government and the MPO which are eligible...The success

City of Newport xvi

of the SHSP is dependent on implementation at the local level. SS4A will fund a wide array of activities addressing the priority safety concerns in Rhode Island.

RIDOT's participation in the Statewide Safety Action Plan, as well as its acknowledgements in previous plans as noted above, show its commitment to work with municipalities to advance local and regional safety priorities across all roadway jurisdictions.

City of Newport xvii

# 1. Leadership Commitment and Goal Setting

# 1.1 Leadership Commitment

City of Newport leaders are committed to the goals set forth in this Safety Action Plan. The Newport City Council adopted a resolution on February 12, 2025, in support of Vision Zero (provided in Appendix A), which formally adopted the following goals and commitments:

- "The Vision Zero: Safe Streets for All goal of eliminating traffic deaths and serious injuries on City Streets by 2034, and endorses Vision Zero as a comprehensive and holistic approach to achieving this goal.
- A commitment to establishing a continuous and evolving evaluation framework that includes regular analysis and tracking of the implementation progress of Keep Newport Moving and the supportive 2025 Safety Action Plan. This framework will involve the ongoing assessment and revision of strategies, actions and metrics to ensure progress toward the goal of eliminating traffic deaths and serious injuries by 2034."

The resolution and local news coverage, in the Newport Daily News, are provided in Appendix A.

Figure 6. Safety Action Plan consultant Shawna Kitzman (Toole Design) presenting safety data to Newport City Council

# 1.2 Goal Setting

The primary goal of this Safety Action Plan is to achieve zero roadway fatalities and serious injuries by 2034.

Safety action planning touches on many other areas of public interest. This effort also supports Newport's four goals outlined in the *Newport Transportation Master Plan* (City of Newport 2023):

- **Equity**: Support the mobility needs of people of all ages, abilities, races, and economic backgrounds.
- Access: Support economic development in Newport through increased multimodal access to local businesses, tourist destinations, and job centers.
- Mode Shift: Increase the share of trips made by walking, biking, and transit.
- **Environment**: Prepare for the impacts of climate change and embrace Newport's environmental resources.

Furthermore, Newport's 2024 Strategic Plan includes Newport's Multimodal Transportation Network as one of the City's five Strategic Outcome Areas, stating that, "Newport strives to connect our community through a variety of safe, reliable, convenient, and innovative transportation options" (City of Newport 2024).

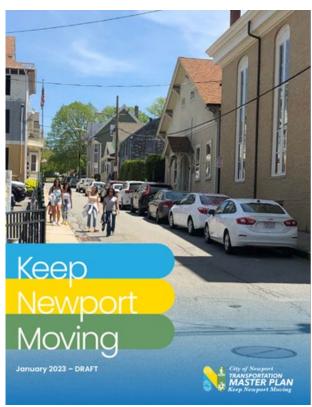

Figure 7. Recent Newport Plans that Inform Newport's Transportation Goals

# 2. Planning Structure

Numerous partners are essential to plan implementation. These partners include different levels of government that manage Newport's roads. Across the state, RIDOT controls 17 percent of the roadways, municipalities control 75 percent, private roads comprise 8 percent, and federal interstates make up less than 1 percent of Rhode Island's roadway infrastructure. Other key partners who helped develop the Plan and who will be key to its success include the Newport Police Department, Aquidneck Island Land Trust, Bike Newport, and Rhode Island Bike Coalition (RIBike). This chapter describes the current and future roles these groups will play related to transportation safety.

# 2.1 Current Planning Organizational Description

This Safety Action Plan was developed in close collaboration with the City of Newport, members of the Aquidneck Island Land Trust, Bike Newport, and RIBike advocacy groups.

# 2.2 Recommended Organizational Changes Post-Safety Action Plan

To set Newport up for success in implementing this Safety Action Plan, the city defined the roles and responsibilities shown in Table 1.

Table 1. Vision Zero Roles and Responsibilities

| Responsibilities                                  | Staff Level   | Oversight Level   |
|---|---|---|
| Implement the Plan                                | <ul><li>Regional Transportation Planner<br/>[new role]</li><li>Newport Planning Staff</li></ul> | <ul> <li>Aquidneck Island Transportation         Commission [new body]</li> <li>Newport Transportation Working         Group</li> </ul>   |
| Monitor and Evaluate Outcomes Post Implementation | <ul><li>Regional Transportation Planner<br/>[new role]</li></ul>                                | <ul> <li>Aquidneck Island Transportation</li> <li>Commission [new body]</li> </ul>  |
| Update the Plan                                   | <ul> <li>Regional Transportation Planner<br/>[new role]</li> </ul>                              | <ul> <li>Aquidneck Island Transportation</li> <li>Commission [new role]</li> <li>Newport Transportation Working</li> <li>Group</li> </ul> |

At the local level and as called for in the Newport Strategic Plan (2024), a **Newport Transportation Working Group** will be formed, consisting of the Newport City Engineer, Police Chief, and Parking
Attendant. The Transportation Working Group will be responsible for oversight and implementation of all aspects of Newport's transportation goals, including Vision Zero. The **Newport planning staff** will support this group and work with them to facilitate implementation of this Safety Action Plan.

At the regional level, this Plan proposes identifying an organization that can support Vision Zero across the three Aquidneck Island municipalities: Newport, Middletown, and Portsmouth. Regional coordination includes forming the **Aquidneck Island Transportation Commission**, comprised of Aquidneck Island's municipal planners, engineers, public works, and fire and police department leadership to meet quarterly. The commission could also include representatives from each municipality's Bicycle and Pedestrian Advisory Committee (as applicable), or other elected or appointed boards, as appropriate, and from Bike Newport, Naval Station (NAVSTA) Newport, the Greater Newport Chamber of Commerce, and RIPTA.

The National Oceanic and Atmospheric Administration Marine Operations Center Facility, which is in construction on NAVSTA Newport's campus, could also be represented once established.

The regional commission would be supported by one full-time, permanent **Regional Transportation Planner** position, with a long-term organization identified to host. This role would be responsible for overseeing the implementation of the three municipal plans, annual reviews, data analysis, and public engagement. This new role will foster an island-wide approach to transportation safety and provide technical support for local staff.

This new Regional Transportation Planner role will foster an island-wide approach to transportation safety and free up capacity for local staff.

# 3. Safety Analysis

# 3.1 Analysis Overview

The safety analysis uses data to identify key crash patterns, trends, and contributing factors that have led to fatal and serious injury crashes in the City of Newport. This analysis is based on 5 years of crash data (2019 to 2023) collected by enforcement agencies using the State of Rhode Island Uniform Crash Report form and roadway and land use data. Together, this information identifies the types of infrastructure, behavior, and contexts that impact safety performance most. Safety analyses inform policy, infrastructure, and programming improvements for all modes of travel, as described in Chapter 7.

The key findings from the analysis are presented below. The methodology for the analysis is described in Appendix D.

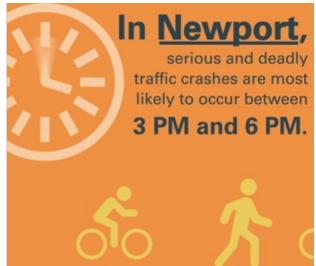

# Why focus on fatal and serious injury crashes?

The goal of the Safe System Approach is to eliminate fatal and serious injuries. To support that goal, the safety analysis focuses on crash patterns and factors for fatal and serious injury crashes where possible. For some crash types where there are few data points (e.g., crashes involving pedestrians), crashes that did not result in a death or serious injury may be included to help reveal crash patterns.

# Why look at 5 years of crash data?

Crashes can fluctuate from year-to-year based on road conditions, community circumstances, and more. A 5-year study period effectively balances changes in safety over time while capturing overall trends. The result is a safety analysis that is comprehensive and supports long-term decision making.

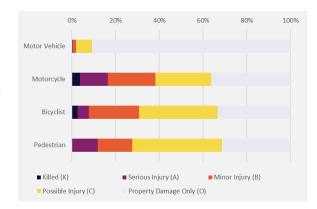

# 3.2 Baseline Crash Analysis

The key findings that informed Newport's Safety Action Plan are presented below; complete results can be found in Appendix C.

# 3.2.1 What types of crashes happened in Newport from 2019 to 2023?

In Newport, according to the 5-year (from 2019 to 2023) crash dataset used for the Safety Action Plan, 12 percent of all crashes led to someone being killed or injured (334 crashes) and 30 (1 percent) of harmful crashes led to someone being killed or seriously injured.

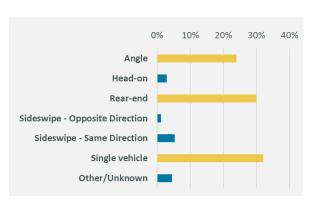

Crashes by Mode and Severity

Compared to people in vehicles, people walking, bicycling, or riding a motorcycle were much more likely to be injured or killed when crashes occurred.

Sixty-nine percent (69 percent) of pedestrian crashes and sixty-seven percent (67 percent) of bicycle crashes led to someone being killed or injured.

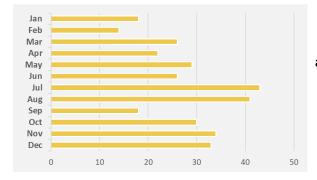

Injury Crash Types (top types highlighted in yellow)

The most common types of crashes in Newport were **angle** (vehicles colliding at an angle), **rear-end** (one vehicle rear-ending another), and **single vehicle** (a vehicle crashing into a fixed object).

Together these three types accounted for 88 percent of crashes resulting in an injury or fatality.

Injury Crashes by Month

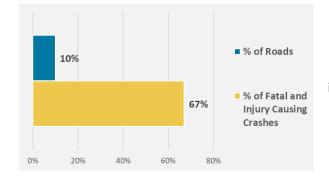

Peak tourist season in Newport, July and August, saw the highest numbers of crashes.

July experienced the most crashes resulting in injury or fatality (38).

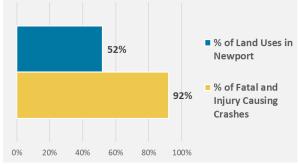

State roads accounted for 67 percent of crashes resulting in an injury or fatality, even though they make up a 10 percent of total roadway mileage.

92 percent of fatal and injury crashes occurred in parts of Newport with urban land uses, while only 52 percent of Newport is classified as urban.

# 3.2.2 Where did crashes occur in Newport from 2019 to 2023?

The hot spot map shown in Figure 8 shows the locations of the fatal and injury crashes that occurred in Newport from 2019 to 2023. Most injury crashes in Newport happened in and around the downtown area. There were also injury crash hot spots and many recent crashes along Broadway and Memorial Boulevard, the key routes to and from the core of the City. The following sections of this plan explore high-risk locations in more detail.

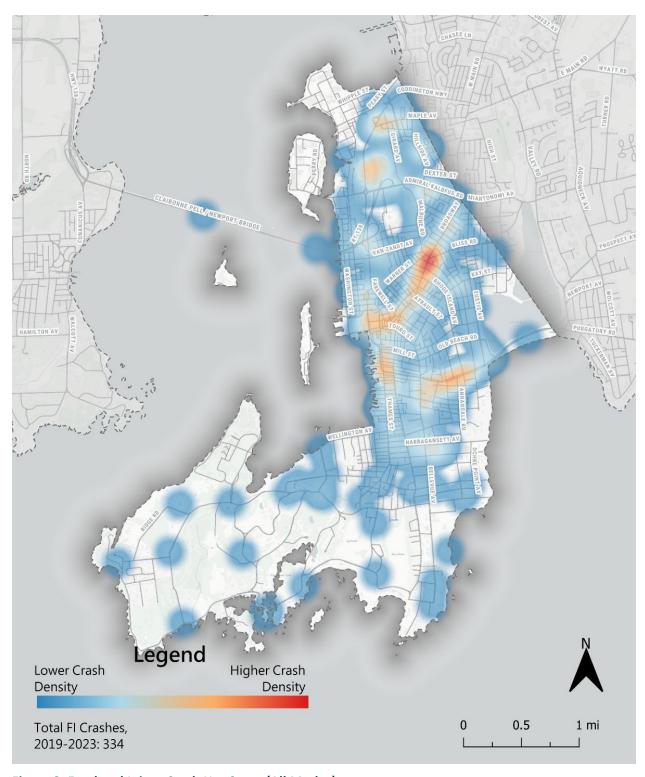

Figure 8. Fatal and Injury Crash Hot Spots (All Modes)

# 3.3 High-Risk and High-Injury Network

Rather than just focusing on locations where crashes have occurred in the past, the high-risk analysis allows city and state leaders to focus on places that are more likely to have future crashes – either because they have a trend of past crashes or because they are similar to other locations that have high crash rates. The team used statewide data to identify risk factors that are common to places with more crashes. The high-risk factors vary depending on the land use context (urban, suburban, and rural) and the crash type (all crashes versus. only crashes involving people walking and biking).

In all contexts and crash types, roads with high traffic volumes, state-owned roads, streets close to schools, and areas with more zero-vehicle households have higher crash risk. Some of the risk factors vary by land use; for example, in suburban areas places with high populations of people below age 18 have higher risk. Some of the risk factors vary depending on the type of crash; for example, streets close to parks have a higher risk of crashes involving people walking and biking. See Appendix D for all the risk factors evaluated.

The result of this analysis is the High Injury Network, which combines:

- A reactive look at where crashes have occurred in the past. The project team ranked all street segments based on past crashes (from 2019 to 2023) and included the top 15 percent of locations in the High-Injury Network.
- A proactive look at where future crashes are more likely to occur. Using the high-risk analysis
  described above, the project team included the top risk tiers (critical, high, and medium) in the HighInjury Network.

# 3.3.1 What streets have a high future crash risk?

The project team used this approach to create two combined High Injury Network maps for Newport: one for all modes (Figure 9) and one for vulnerable road users (Figure 10). Vulnerable road users refer to people traveling without the protection of a vehicle, including people walking, bicycling, scooting, rolling in a wheelchair or mobility device. Key findings:

- The All Modes High Injury Network (Figure 9) accounts for 36 miles, which is roughly 27 percent of Newport's 132 total miles of roadway. Yet, roads on the High Injury Network represent 80 percent (24 crashes) of Newport's fatal and serious injury crashes.
- Of the 334 total injury crashes that occurred in Newport over the last 5 years, 78 percent (261 crashes) occurred on the High Injury Network.
- The Vulnerable Road User Modes High Injury Network (Figure 10) accounts for 26 miles (20 percent) of Newport's 132 total miles of roadway, but represents 89 percent (8 crashes) of Newport's fatal and serious injury crashes involving vulnerable road users.
- Of the 61 total vulnerable road user injury crashes that occurred in Newport over the last 5 years, 77 percent (47 vulnerable road user crashes), occurred on the Vulnerable Road User High Modes Injury Network.
- Both High Injury Network maps include most of the major roads in Newport, as well as most of the streets in the downtown core. The major streets that provide access to and from Newport and downtown Newport on the High Injury Networks include Broadway, Memorial Boulevard, and Farewell Street. The analysis also found that vulnerable road users' high-risk is more concentrated on local streets. Some of the neighborhood streets with low traffic volumes but high risk vulnerable road user levels, include Halsey Street and Gibbs Avenue.

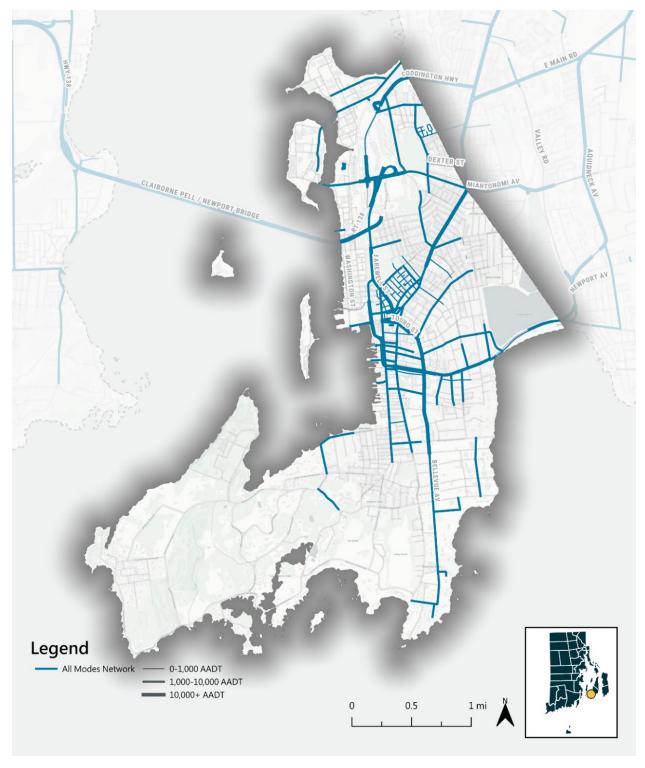

Figure 9. High-Injury Network Map – All Modes

(AADT = Average Annual Daily Traffic)

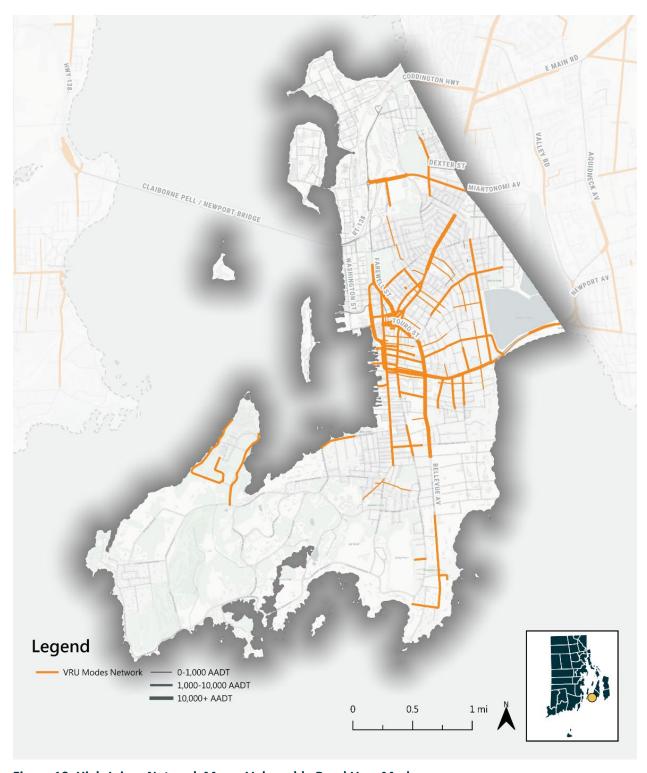

Figure 10. High-Injury Network Map – Vulnerable Road User Modes

(AADT = Average Annual Daily Traffic)

# 4. Engagement and Collaboration

Stakeholder engagement and collaboration ensure that this Safety Action Plan includes diverse perspectives and insights, identifies risks not apparent in the data, and provides local support for solutions. The team conducted engagement early and at key junctures throughout the Plan development, including stakeholders and the public as part of the decision-making process.

# 4.1 Stakeholders

Many stakeholders contributed to the creation of this plan. Collaborating as a region, leadership from the City of Newport, the Town of Middletown, and the Town of Portsmouth established an early network of key stakeholders to include in the engagement process. These stakeholders helped facilitate public engagement and encourage feedback from the broader community. As outlined in Section 2.2, select organizations and individuals will continue to advise the city as they advance safety solutions and investments during implementation.

When identifying key stakeholders for the Safety Action Plan, the team engaged various organizations and individuals, including those representing the following groups:

### **Municipal Stakeholders**

- Planning Department staff
- Public Works Department staff
- Community liaison
- Local law enforcement
- Newport City Council

# **External or Regional Stakeholders**

- Aquidneck Island Land Trust
- Grow Smart RI
- Bike Newport
- Rhode Island Bike Coalition (RIBike)
- NAVSTA Newport

# 4.2 Stakeholder Feedback Summary

To facilitate regional coordination on roadway safety, the project team hosted the Aquidneck Island Transportation Safety Summit on October 22, 2024. The City of Newport staff were among the 11 participants who represented the three island municipalities, the Aquidneck Island Land Trust, and the Rhode Island Bike Coalition advocacy group. From Newport, the City Planner, Assistant City Planner, and Community Liaison participated. The workshop focused on shaping Safety Action Plan strategies, actions, and implementation strategy development appropriate to the communities.

The project team held the Aquidneck Island Transportation Safety Summit to develop strategies and actions with key stakeholders (Figure 11). Newport City Planner Rebeccah Trefethen and the group representing Aquidneck Island municipalities, non-profits, and the team contributed to the development of this plan.

Figure 11. Aquidneck Island Transportation Safety Summit

The key themes from the Safety Summit participants include the following:

### Theme 1: Safer Streets

Stakeholders support the development of the RIDSP and RIDOT's Complete Streets Plan and Design Guidelines. There is a need for street design guidance that accounts for accessibility, rooted in best practices and applicable to Newport's context, including narrow historic roadways. Prioritizing areas with the greatest need, infrastructure upgrades should protect pedestrians, transit riders, and bicyclists by incorporating protected bike lanes, accessible sidewalks, and traffic calming. Additionally, they support testing "quick build" solutions to generate community support and political will, and to collect data before investing in permanent changes.

### Theme 2: Safer Vehicles and Speeds

Stakeholder feedback focused on implementing traffic calming, such as speed humps and narrower lanes to reduce speeding. Suggestions included creating neighborhood-level reduced speed zones and evaluating speed limits to ensure they are context-sensitive and prioritize safety for all road users. Stakeholders expressed support for speed safety cameras in school zones, where applicable, and installing safety countermeasures on municipal vehicle fleets over time.

# **Theme 3: Safer People**

The group elevated the importance of developing a Safe Routes to School program to ensure children and families can travel safely to and from school. Additionally, promoting safer transportation options such as bikeshare and e-scooter share programs, and encouraging walking, biking, and transit are key strategies conducive to Aquidneck Island. Stakeholders also support disseminating additional road safety information to new drivers, including training on defensive driving and on non-driving modes to cultivate a culture of safety and multimodal awareness among all road users.

### Theme 4: Post-Crash Care & Data Transparency

Stakeholder feedback emphasized the need to develop a robust local crash data tool to improve data sharing and analysis. Standardizing crash data collection and reporting while making anonymized data accessible online in a user-friendly format were highlighted as critical steps to increase transparency and inform decision-making. Additionally, stakeholders recommended before and after studies of traffic-calming interventions to evaluate their effectiveness and inform future projects.

Select actions were eliminated based on Task Force review and municipal feedback during the planning process.

# 4.3 Public Engagement

Public engagement can transform any planning study into a collaborative effort, resulting in a more practical and responsive plan. This Safety Action Plan is no different, and the team supported the City of Newport to identify points in the process connect with the public about their experiences and thoughts on roadway safety. This feedback is critical data that helped shape plan strategies and actions.

Figure 12. Team staff partnered with Bike Newport to discuss roadway safety at the popular Broadway Open Streets event

Public engagement opportunities during the development of the Safety Action Plan included:

- Community-wide survey, available both in paper and online
- Tabling and participation at several events throughout Aquidneck Island, which drew a regional audience:
  - o newportFILM Screening of The Street Project on July 18, 2024
  - Portsmouth Family Day on August 11, 2024
  - o Middletown Town Concert on August 12, 2024
  - Aquidneck Farmers' Market on September 7, 2024
  - Sakonnet Bike and Stroll on September 14, 2024
  - o Anna D's Farmers' Market on September 16, 2024

- o Middletown Family Day Prevention Coalition on September 28, 2024
- Broadway Open Streets on October 12, 2024

Through these engagement touchpoints, Newport identified safety concerns broadly within the community, educated the public on transportation safety challenges, evaluated support for proposed safety improvements, and established partnerships for long-term improvements.

# 4.4 Public Engagement Summary

Through surveys, tabling at community events, and meeting regularly with City Planning staff, the City of Newport gained insights from the public to inform this Safety Action Plan and its implementation. Additional survey details and records from the public engagement process are included in Appendix B.

Key takeaways include the following:

- Respondents are open to and looking for change on Newport's roadways.
- There is a desire to implement expanded and improved pedestrian and bicyclist infrastructure, particularly in high pedestrian areas, though concerns of bicyclist and e-bike rider behavior persist.
- Driver behavior concerns, particularly speeding and running stop signs/stop lights, were highlighted by respondents.
- Bus stops are often perceived to be unsafe due to inadequate facilities, lighting, and their proximity to the street (often right off the sidewalk or in areas with no sidewalk).

# 4.4.1 Community Survey

Paper and online surveys solicited input from the public during the public engagement process. The surveys included questions about travel patterns, important destinations in the community, safety concerns, infrastructure improvement strategies, and how the respondents would weigh various tradeoffs. Open-ended questions allowed respondents to provide thoughts, comments, or questions for the City of Newport's consideration and inclusion in this plan.

A single statewide platform provided an online resource that incorporated information and feedback from all participating communities. A total of 33 surveys were completed by Newport residents between July 17 and September 16, 2024. Note that this survey received a relatively low response rate compared to participating Rhode Island communities.

### **Survey Responses**

- Survey Households with at Least One Car: 84 percent
- Primary Locations of Concern (from survey): Broadway (13 mentions), Spring Street (11), Bellevue
   Avenue (10), Memorial Boulevard (8)
- Primary Themes (from survey): Driver behavior (19), complete streets (6), walking (5), enforcement
   (4)

Newport has more neighborhood streets than other Aquidneck Island communities, due to its dense development pattern. This provides more opportunities to walk or bike. Walking is a preferred mode for many survey respondents in Newport, as shown in Figure 13. Discussions with community members indicate a perceived conflict between drivers and walkers or bicyclists who share the streets. This is especially true among the narrow streets in the historic core. Respondents desire increased separation

between drivers and people on foot, bike, or using micromobility devices, with more and better crosswalks, as well as bicycle facilities.

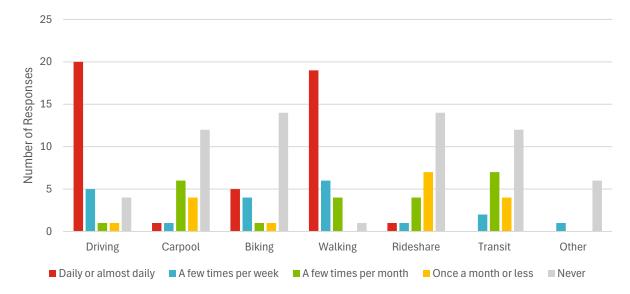

Figure 13. Travel Modes and Frequencies

When asked to identify behavioral programs that would be most effective, respondents indicated the greatest support for enforcement, followed by speed management (including setting appropriate speed limits for the context), and education for distracted drivers, shown in Figure 14.

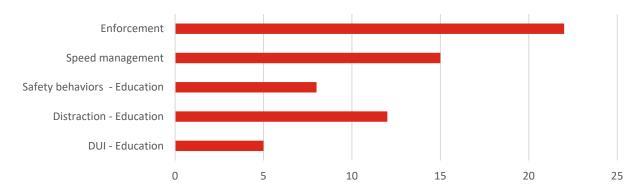

Figure 14. Desired Behavioral Programs for Improving Road Safety

Table 2 lists the recurring themes presented in the open-ended responses on the interactive survey map and other comment boxes in the survey. This analysis found that Newport is the only community on Aquidneck Island where vehicle speeds are not as important to survey respondents as other aspects of the transportation system. Respondents identified issues nearly evenly across all modes of transportation. Specifically, respondents highlighted their desire for smoother pavement, an improved bicycle network, safer crossing, and bus shelters and signage.

Table 2. Survey Feedback by Theme

| Theme                        |                                | Mentions |
|------------------------------|--------------------------------|----------|
| Driver Comfort               | Smoother pavement              | 16       |
|                              | Lower speeds                   | 14       |
|                              | Better striping                | 11       |
|                              | More visible signs             | 8        |
| Bicyclist/Pedestrian Comfort | Bike network                   | 15       |
|                              | Safer crossings                | 15       |
|                              | Sidewalk network               | 12       |
|                              | Slower traffic                 | 8        |
| Transit Rider Comfort        | Shelters and seating           | 16       |
|                              | Signage                        | 15       |
|                              | Late night and weekend service | 10       |
| Speeding                     | Speeding                       | 7        |

# **Notable Survey Comments**

"I work in Providence and live in Newport. My dream would be to eliminate my car commute. I used to ride the bus, but the 1.5 hrs. vs 45 min. was not feasible over time. In both cities I want more protected bike lanes and drivers who are compassionate about cyclists and pedestrians. I HATE hearing that cyclists should be ticketed in a world where the car is always prioritized. Let's combat that sentiment."

"Better and more crosswalks. [Ticket] red light runners."

"Enforce the laws that are on the books. Speeding and distracted driving are huge issues. RI is WAY behind on bike and pedestrian infrastructure. Maybe it's just Newport, but boy, do we need better bike paths. Address the e-bike and e-scooter issue. These are motorized vehicles, and they require training and personal responsibility. Be bold! Consider satellite parking schemes for Newport and other colonial era towns and cities. Keep the cars out of the center."

"Bus stops are not in safe locations (some on the side of busy roads with no sidewalks), also not reliable bus times, and bus takes very long time to travel. Texting and driving is a big problem and there is not a lot of enforcement."

"Newport was extremely dangerous to drive in this summer. The number of cars increased from the summer of 2023 and drivers were frustrated and making all sorts of illegal turns. Also, due to WAZE directions, traffic on our side streets was horrific with the same kind of dangerous driving. Speeding, angry drivers, frustrated locals."

"[Bicyclists] in Newport do not obey traffic laws and signs.
They drive against traffic, through stop signs and on sidewalks."

# 4.4.2 Pop-Up Events

Public input was also gathered by tabling at local community events. At each of these events, the team provided posters, maps, and informational flyers describing the process of the Safety Action Plan. They often opened the conversation with "What's the most dangerous street in Newport?"

The following lists key findings from these public engagement efforts. Feedback is categorized by theme and street.

- Concern about lack of sidewalks
- Concern about street parking blocking traffic (especially in June)
- Concern about speeding
- Behavioral issues (pedestrians crossing mid-block or without a signal, drivers not respecting stops or speed sign)
- Concern about lack of lighting at night
- Concern about lack of bike lanes or shared use paths

Figure 15. Multigenerational Engagement with Kids About Roadway Safety in Newport

Table 3 summarizes the roadway-specific community comments regarding the locations that received the most attention, organized with the most frequently mentioned locations listed first.

**Table 3. Top Newport Public Comment Locations** 

| Location   | Comments  |
|--|---|
| Broadway   | Nine individuals expressed significant concerns about safety and accessibility, consistently describing the area as dangerous and poorly maintained. The main themes include inadequate lighting, speeding, the presence of potholes, and confusing signage, which contribute to the perception of Broadway as hazardous, especially given multiple mentions of a pedestrian fatality.                              |
| Thames Street                                      | Five respondents highlighted significant issues regarding congestion and safety, noting the difficulty of navigating due to excessive car traffic and obstructive loading activities. Main themes include inadequate road width, challenges for cyclists posed by cobblestones, and concerns about loitering individuals. Concern cited about drivers running red lights at Thames Street and America's Cup Avenue. |
| Malbone Road                                       | Two responses about Malbone Road emphasize its unsuitability for pedestrians due to a narrow shoulder and high-speed traffic. The combination of multiple bus stops and obstructed visibility from hedges further heightens concerns about the road's safety for both pedestrians and drivers.  |
| Spring Steet/ Coggeshall<br>Avenue                 | Four responses reveal safety concerns for cyclists and pedestrians due to inadequate space and poor visibility. Key themes include the narrow biking area that also hampers runners with strollers, the creation of conflict points at crossings, and increased congestion during tourist season.   |
| Ruggles Avenue                                     | The absence of sidewalks and presence of fast-moving large vehicles is of top concern. Key issues include the risk posed by big trucks near the military base, inadequate speed management around speed bumps, and blind spots along the roadway, creating an uncomfortable environment for people walking and biking.  |
| Memorial Boulevard                                 | Four individuals described the area as dangerous for both pedestrians and cyclists. Main themes include narrow roadways, unplowed sidewalks in winter, unsafe sightlines, and issues with midblock jaywalking, particularly near Dunkin' Donuts, highlighting a need for better infrastructure and safety measures. Participants noted that a person was killed in a crash here.                                    |
| Hillside Avenue                                    | Participant has seen improvements surrounding schools, stop signs, and other improvements have made it safer.   |
| Bellevue Avenue                                    | Respondents emphasize the need for improvements to pedestrian infrastructure and the challenges posed by peak tourism season. Key themes include inadequate sidewalks, obstructive street parking during busy months, and additional pole-mounted mirrors at sharp corners to enhance visibility and safety.  |
| Streets around Claiborne<br>Pell Elementary School | Several parents of students do not feel comfortable walking or biking their kids to school because of e-bike speeds and behavior.   |
| Gerard Avenue                                      | Participants noted concerns about speeding vehicles and the lack of sidewalks, making the area uncomfortable for pedestrians.   |

# 5. Equity Considerations

# **5.1** Defining Equity

Equity was a key consideration during every aspect of this Plan development. In the context of the SS4A Program, equity is the practice of being fair and impartial when developing plans and strategies. It also means recognizing that people have different starting points and that adjustments need to be made to address imbalances. Imbalances may exist for people in rural areas, economically disadvantaged communities, historically underserved residents, and vulnerable roadway users – including people walking and bicycling. Acknowledging the needs of these groups, the City of Newport evaluated strategies that encourage the fair sharing of resources, address external costs, promote fair pricing, serve mobility-disadvantaged travelers, and enhance overall affordability and economic opportunity while protecting the safety of all travelers. These goals were also memorialized as one of the four goals outlined in the 2022 Newport Transportation Master Plan, asserting that Newport will, "support the mobility needs of people of all ages, abilities, races, and economic backgrounds."

# **5.2** Equity Issues

This Safety Action Plan includes an evaluation of how vulnerable and historically disadvantaged groups travel within the boundaries of the City of Newport and seeks, through engagement and data evaluation efforts, to understand the greatest barriers and safety challenges they face. Special efforts were made to reach out to stakeholders and members of the public from a variety of backgrounds and perspectives to better understand their needs and priorities. Policies and project priorities were evaluated against those needs and priorities to appropriately balance actions outlined in this Safety Action Plan.

# 5.3 Equitable Engagement

Through previous transportation planning processes, engagement events with Newport's underrepresented community revealed valuable insights as part of Ride Island's regional vision for Aquidneck Island. The City of Newport recognized the important input that traditionally underrepresented communities have provided in these previous plans and aimed to leverage that feedback in this Safety Action Plan.

The Ride Island team (including representatives from Bike Newport, Grow Smart RI, and Toole Design) conducted a series of focus groups in 2022 with youth bicyclists, bicycle-dependent Spanish speaking residents, and community representatives of the Newport Health Equity Zone (HEZ). The HEZ is a Rhode Island state initiative and citywide coalition working to remove structural, financial, and environmental barriers to health and well-being. These targeted meetings, consisting of between 6 and 14 participants, were held in familiar, transit-accessible venues to promote safe, non-judgmental, and open dialogue.

# **5.4** Key Equity Findings

The focus group with middle and high school students who ride bicycles resulted in a suggestion for separated bike lanes to make riding safer and more comfortable. In the focus group with Spanish speaking residents, many participants rode bicycles as primary modes of transportation due to the low cost and ease of use, especially those who had multiple jobs. However, they would use public transportation more

if better service were available. They shared ideas for improved roadway lighting, signage, and separated bike lanes. They agreed that drivers need to be more aware of cyclists and provide adequate space. They indicated that some drivers do not respect cyclists, and bicycle crashes are often due to the lack of driver attention and caution. This contributes to parents preventing their children or teens from riding bikes.

Residents of the Newport HEZs echoed these opinions, indicating a desire to ride more often but noting existing barriers to riding. This group similarly suggested connecting the entire island with safe bicycling and walking infrastructure to increase roadway safety and help alleviate traffic congestion.

Fatal and injury crashes are overrepresented in Newport's disadvantaged communities, based on the Justice40 index. This multidisciplenary index identifies disadvantaged communities based on exposure to pollution and other environmental hazards, as well as socioeconomic distress.

Disadvantaged communities make up 32% of Newport's population but experience

**45%** 

of traffic crashes where someone is injured or killed. 18%

of the harmful or deadly traffic crashes in these communities involve people walking and biking.

The data on transportation crashes underscore the urgent need for targeted safety interventions, particularly in **disadvantaged areas**, where disproportionate injury crashes occur. These interventions should focus on enhancing road infrastructure, implementing traffic calming measures, fairly focusing enforcement efforts, and public awareness campaigns aimed at reducing high-risk behaviors. **Ensuring a fair distribution of resources to address the disparities in transportation safety will be crucial in mitigating fatal injuries and improving overall community well-being.** 

The project team used these considerations in the project selection matrix, described in Chapter 7.

Figure 16. Focus Groups with Traditionally Underrepresented Communities

Bike-dependent workers (left) indicated a need for greater driver awareness of bicyclists as well as improved street lighting, signage, and separated bike infrastructure. Women affiliated with Newport's Health Equity Zone have lower rates of car-ownership (right). They rely on transit, rideshare, and walking or biking. They would ride or walk more if they felt safer.

# 6. Policy and Process Changes

# 6.1 Defining Policy and Process in Safety Action Planning

Eliminating fatal and serious injury crashes while improving the safety of roads in the City of Newport will require political will and public support for ambitious and transformative policies. The project team explored evidence-based and high-impact policies to reduce fatal and serious injury crashes within the City of Newport. In accordance with FHWA's priorities under the SS4A Program, policy recommendations were geared towards providing redundancies to protect human life and address the following areas:

- Leadership commitment to safety
- Equity and community engagement
- Safe infrastructure and safe speeds
- Data-driven transparency and accountability

# 6.2 Key Policy and Process Findings

#### **6.2.1** Summary of Key Safety Policies and Plans

The policies and plans in Table 4 were reviewed as part of the Newport Safety Action Plan. Each of these policies and plans support roadway safety directly or support related goals around transportation access, resilience, and equity.

| Plan or Policy   | Year | Jurisdiction |
|--|------|--------------|
| Rhode Island's Complete Streets Action Plan                      | 2015 | Statewide    |
| Moving Forward RI 2040 Long Range Transportation Plan            | 2020 | Statewide    |
| Statewide Bicycle Mobility Plan                                  | 2020 | Statewide    |
| Statewide Transportation Improvement Program Revisions           | 2022 | Statewide    |
| Rhode Island Strategic Highway Safety Plan 2023-2027             | 2022 | Statewide    |
| Rhode Island Vulnerable Road User Safety Assessment              | 2023 | Statewide    |
| Rhode Island Bus Stop Design Guide                               | 2024 | Statewide    |
| Resilience Improvement Plan                                      | 2024 | Statewide    |
| Aquidneck Island Transportation Study                            | 2011 | Regional     |
| Aquidneck Island Planning Commission – Strategic Plan            | 2016 | Regional     |
| Ride Island Bike Plan  | 2023 | Regional     |
| Green and Complete Street Policy                                 | 2021 | Municipal    |
| Keep Newport Moving – City of Newport Transportation Master Plan | 2022 | Municipal    |
| Newport Strategic Plan   | 2024 | Municipal    |

**Table 4. Plans and Policies Reviewed** 

#### 6.2.2 Summary of Key Findings and Issues

#### **6.2.2.1** Statewide Plans

The State of Rhode Island's most recent iteration of long-range transportation plans contain ambitious safety recommendations for improved statewide transportation policy across all modes.

Moving Forward RI 2040, the state's long-range transportation plan as required by DOT, serves as a framework for understanding a larger universe of mode-specific comprehensive planning efforts, including the Rhode Island Vulnerable Road User Safety Assessment (2023), the Bicycle Mobility Plan (2020), and the

Bus Stop Design Guide (2024). The goals of each plan align with the overarching goals of the comprehensive plan summarized via the following quote:

"This plan envisions a multimodal transportation network that connects people, places and goods in a safe and resilient manner by providing effective and affordable transportation choices that are supportive of healthy communities, provide access to jobs and services, and promote a sustainable and competitive Rhode Island economy." (Moving Forward RI 2024)

The Strategic Highway Safety Plan (2022), which directly supports the Safety Action Plan, opens with a Vision Zero commitment from the RIDOT director Peter Alviti, Jr. This plan is organized under three focus areas: (1) behavioral (e.g., impaired driving), (2) infrastructure (e.g., intersection improvements), and (3) road users (e.g., pedestrians). The Strategic Highway Safety Plan encourages municipalities to pursue SS4A funding, specifically noting first responder service, integrated data development, and new safety technologies as potential pathways to eliminating road fatalities.

The recommendations of the statewide Bicycle Mobility Plan support this Safety Action Plan. They include updating controlling criteria on state-owned roads to mandate multimodal consideration in project development, development of a "lending library" of quick build materials to assist municipalities in demonstration projects, a focus on the pedal and park model of bicycle commuter route planning, and an increase in technical assistance to municipalities interested in developing Complete Streets policies.

Other vulnerable road users are addressed in the Vulnerable Road User Safety Assessment, targeting three primary strategies: (1) reducing vulnerable road user exposure to vehicular traffic through infrastructure and behavioral improvements, (2) installing countermeasures at high-risk locations identified via the Highway Safety Improvement Program, and (3) implementing projects from the Bicycle Mobility Plan. This plan includes a risk assessment of vulnerable road user crashes, identifying major contributing factors in crash severity as those taking place on Principal/Minor Arterial roads, streets in urban settings, and under dark conditions where the roadway is lit by streetlights.

#### 6.2.2.2 Regional: Aquidneck Island

Aquidneck Island has produced several impactful planning studies over the last decade that provide a comprehensive reimagining of the transportation systems on Aquidneck Island.

Ride Island, also called the Aquidneck Island Bicycle Network Implementation Plan (2023), details the creation of an island-wide cohesive network of bicycle and pedestrian facilities. Ride Island is an initiative of Bike Newport, Grow Smart RI, and Toole Design, with financial support from the van Beuren Charitable Foundation. The vision is that people will choose to bike and walk for most short trips on the island. Ride Island synthesizes previously created plans, studies, and projects to address system gaps and provides actionable recommendations for the towns of Newport, Middletown, and Portsmouth as a regional effort. The primary goals of the initiative are (1) a connected bike network on Aquidneck Island's priority corridors, (2) gold-level bike/walk community designation, (3) Vision Zero, and (4) +300 percent bike, walk, and transit trips.

The older Aquidneck Island Transportation Study (2011) included detailed policy and infrastructure improvements that have been partially executed by local governments. Initial policy recommendations such as adopting Complete Streets ordinances have moved forward, while the development of an island-wide strategic transportation committee has not yet materialized. The need for a connected bicycle path network was recognized and has been advanced through the Ride Island plan and adjustments to the Statewide Transportation Improvement Program.

#### 6.2.2.3 Local: Newport

In Newport, the Keep Newport Moving Plan (2022) and the Green and Complete Streets Policy (2021) represent significant progress in multimodal planning and build momentum for this Safety Action Plan.

The Keep Newport Moving Plan recommended that Newport develop a Vision Zero Action Plan and advances Vision Zero principles to eliminate severe traffic crashes and includes measures such as traffic calming, bike lanes, and car-free weekends on high-traffic streets. Many of the recommendations in this Safety Action Plan serve to advance the recommendations in Keep Newport Moving.

In 2021, Newport's City Council voted unanimously to pass the Green and Complete Streets Policy, an important step to ensuring that transportation projects are designed with consideration for all road users and the environment. Pursuant with this policy, streets shall be designed and planned to accommodate all transportation users of all ages and abilities, while respecting the access needs of adjacent land uses. In addition, streets in Newport shall provide transportation choices that are safe, convenient, reliable, and accessible. This policy directed City of Newport departments to incorporate green and Complete Streets principles into appropriate plans, manuals, checklists, regulations, and programs within 3 years.

More recently, the Newport Strategic Plan (2024) elevated multimodal transportation as one of the City's five strategic outcomes. Under this strategic outcome, the Plan calls for seeking grant funding to implement Keep Newport Moving, collaborating with the Ride Island program to extend bike access, and implementation of traffic calming measures. The Strategic Plan underscores the City's commitment to implementing the Safety Action Plan and the other plans mentioned above.

#### **6.2.3** Key Policy and Process Recommendations

The plans described above informed the policy and process changes outlined for the City of Newport in Chapter 7.

# 7. Action Plan

The Action Plan outlines the specific steps and strategies to address the safety challenges and goals the City of Newport explored throughout this plan. Based on the goals and commitments established in Chapter 1, the City of Newport generated **specific**, **measurable objectives that can be linked to actions and investments**. The City then outlined local and regional processes, new infrastructure, or policy changes needed to meet the goals and objectives. Responsible agencies or individuals to coordinate on each activity were identified. Finally, benchmarks or metrics were generated to enable the City of Newport to target projects, timelines, and progress. These benchmarks and metrics also provide an important data point for maintaining the progress and transparency of implementation efforts described in greater detail in Chapter 8. Table 5 lists the goals outlined in Chapter 1, accompanied by specific objectives.

| Category    | Goal  | Objectives   |
|-------------|---|--|
| Safety      | Achieve Vision Zero.  | <ul> <li>Achieve zero roadway fatalities and serious injuries by 2034.</li> </ul>  |
| Equity      | Support the mobility needs of people of all ages, abilities, races, and economic backgrounds.   | <ul> <li>Equitably direct investments to where they are most needed, based on the safety analysis.</li> <li>Ensure that safety improvements are directed toward historically disadvantage areas of the city.</li> </ul>            |
| Access      | Support economic development in Newport through increased multimodal access to local businesses, tourist destinations, and job centers. | <ul> <li>Incorporate connections to economic<br/>destinations into multimodal safety projects.</li> </ul>  |
| Mode Shift  | Increase the share of trips made by walking, biking, and transit.   | <ul> <li>300 percent increase in bike, walk, and transit<br/>trips.</li> </ul>   |
| Environment | Prepare for the impacts of climate change and embrace Newport's environmental resources.  | <ul> <li>Incorporate resilient and environmentally sensitive design into transportation projects.</li> <li>Through mode shift, minimize the need for additional space getting allocated for vehicle travel and parking.</li> </ul> |

**Table 5. Newport Safety Goals and Objectives** 

# 7.1 Action Plan Strategies

To meet these objectives, the City of Newport identified the following strategy categories. Each strategy is supported by numerous actions, and below the actions, several sub-actions that the City can act upon to progress toward Vision Zero.

- Adopt a Regional Approach to Support Safer Streets
- Increase Roadway Safety and Slow Speeds
- Increase Community Commitment to Vision Zero
- Manage Post-Crash Care and Data Transparency

Further specifics on these detailed actions are provided in Table 6. For each sub-action, there is a list of past plans or policies that relate to the action. The table also specifies whether the action is a policy change, process action, or infrastructure project. Actions are presented alongside the parties responsible for implementation, whether that is the Newport Planning Department or Department of Public Works, the proposed new regional transportation planner, or the Police Department. Each action is also linked to one or more of the five goals presented in Table 5. Finally, the relative timeframe for implementing the actions (short-, medium-, or long-term) is specified in Table 6.

# **Table 6. Newport Safety Action Plan Strategies**

| ID         | Title   | Safety Strategy/Action   | Related Plans or<br>Policies           | Policy / Process /<br>Infrastructure | Parties   | Related Goals   | Timeline |
|------------|---|--|--|--------------------------------------|---|---|----------|
| Strategy 1 | Adopt a Regional Approach to Support Safer Streets  |  |  |                                      |   |   |          |
| Action 1.1 | Establish an island-wide approach to managing regional Vision Zero efforts, relevant planning, and policy.  |  |  |                                      |   |   |          |
| 1.1.a      | Appoint an Aquidneck Island Transportation Commission   | Appoint a regional Aquidneck Island Transportation Commission, comprised of Aquidneck Island's municipal planners, engineers, Department of Public Works (DPW), and Fire/Police Department leadership to meet quarterly. May include a representative from each municipality's Bicycle and Pedestrian Advisory Committee, as appropriate. The Commission should coordinate with agencies mentioned in 1.1.b to ensure a strategic and regional cohesion.  On a local level, assign Vision Zero implementation to the new Transportation Working Group formed out of the Newport Strategic Plan (2024). | STIP (2023-2031)                       | Policy                               | Aquidneck Island<br>Municipalities<br>Aquidneck Island Land Trust's<br>Resilience Program<br>Naval Station Newport<br>Bike Newport          | Safety<br>Equity<br>Access<br>Mode-Shift<br>Environmental | Short    |
| 1.1.b      | Identify regional funding needs and sources   | Identify <b>funding needs</b> for effective management and implementation of Newport's Safety Action Plan. Coordinate with the Town of Portsmouth, the Town of Middletown, Newport's Naval Station and regional entities, such as the Aquidneck Island Land Trust. Capture <b>efficiencies and recognize the island's cohesive transportation network across municipal boundaries</b> .  | STIP (2023-2031)                       | Process                              | Department of Resilience and<br>Sustainability<br>Aquidneck Island<br>Municipalities<br>Aquidneck Island Land Trust's<br>Resilience Program | Safety<br>Equity<br>Access<br>Mode-Shift<br>Environmental | Medium   |
| 1.1.c      | Fund and appoint a dedicated regional planner   | Establish one full-time, <b>permanent Regional Transportation Planner position</b> responsible for overseeing the implementation of the three municipal Action Plans, annual review, data analysis, and public interface. This hire should demonstrate an understanding of housing and economic development fundamentals, to inform cross-disciplinary decision making. House this position in the Aquidneck Island Land Trust Resilience Team.  | STIP (2023-2031)                       | Policy                               | Lead: Aquidneck Island<br>Municipalities<br>Support: Aquidneck Island<br>Land Trust   | Safety Equity Access Mode-Shift Environmental             | Short    |
| 1.1.d      | Conduct safety meetings and develop annual reports  | Hold <b>quarterly Vision Zero meetings</b> with the Aquidneck Island Transportation Commission and conduct <b>annual review of the Action Plan</b> . Include a work plan for projects to be implemented in the upcoming year.  | STIP (2023-2031)                       | Process                              | Aquidneck Island<br>Municipalities<br>Aquidneck Island Land Trust<br>Naval Station Newport  | Safety<br>Equity<br>Access<br>Mode-Shift<br>Environmental | Short    |
| 1.1.e      | Advance infrastructure that increases climate resiliency  | Integrate climate resilience into road safety projects by requiring flood-resistant infrastructure, implementing high-friction and weather-resistant surfaces to reduce skidding, and using green infrastructure like bioswales and enhanced drainage systems to prevent water pooling and maintain safe driving conditions during extreme weather events.   | Resilience Improvement<br>Plan (2024)  | Policy                               | Department of Resilience and<br>Sustainability<br>Utilities Department -<br>Stormwater Division<br>Technical Review Committee               | Environmental   | Short    |
| Action 1.2 | Explore multimodal transportation options to reduce Aquidneck Island's Vehicle Miles Traveled (VMT). Support RIPTA, economic development organization, and other agency efforts to shorten trips and improve transit, Park n' Ride, paratransit, and micro transit options island-wide. |  |  |                                      |   |   |          |
| 1.2.a      | Conduct a Regional Transportation Options Study   | Fund a Regional Transportation Options Study to evaluate alternative modes and innovative options, especially those outlined in previous plans. Explore public transit and/or shared micromobility options, to reduce short-trips by private vehicle and reduce islandwide congestion. Consider coordinated transportation and land use decisions.   | STIP (2023-2031)<br>Ride Island (2023) | Process                              | Aquidneck Island Land Trust<br>Aquidneck Island<br>Municipalities<br>Community Partnerships   | Safety<br>Equity<br>Access<br>Mode-Shift<br>Environmental | Short    |
| 1.2.b      | Explore developing an Active Transportation Fund  | <b>Explore monetary sources to create a dedicated fund</b> to enhance the actualization of an active transportation network. Couple with the evaluation and acquisition of dedicated, subsidized parking and island shuttle service off-island or outside the city center core. Include consideration of an expansion to water taxi routes, to reduce HIN congestion, especially during peak tourism periods.  | STIP (2023-2031)                       | Process                              | Department of Resilience &<br>Sustainability<br>Planning Department   | Safety Equity Access Mode-Shift Environmental             | Short    |

| ID         | Title  | Safety Strategy/Action   | Related Plans or<br>Policies                           | Policy / Process /<br>Infrastructure | Parties   | Related Goals                                   | Timeline |
|------------|--|--|--|--------------------------------------|---|---|----------|
| 1.2.c      | Expand intercept parking locations and programs  | Expand service and accessibility of <b>intercept parking lots</b> with free and frequent shuttle services to downtown and other key destinations during peak seasons. Visitors are already encouraged to part at the Newport Gateway Center on the north side of downtown, within walking distance from most attractions. Complement this with clear wayfinding signage, mobile apps, and tourist information for the visitor center, attractions and hotels promoting shuttle routes, schedules, and nearby parking availability. Partner with navigation apps through programs like Waze for Cities and Google Maps Content Partners to provide localized information and navigation tips for out-of-town drivers.   | STIP (2023-2031)                                       | Policy / Infrastructure              | Communications Department<br>Planning Department<br>RI DOT<br>Community Partnerships  | Safety<br>Access<br>Mode-Shift                  | Long     |
| 1.2.d      | Improve transit  | Work with RIPTA to increase frequency on local bus routes in Newport. Coordinate via Newport's RIPTA Liaison. Route 67, the free Bellevue Trolley to tourist destinations is a high frequency route, the other RIPTA bus routes in Newport are all lower frequency. Consider which of these the less frequent routes serves the largest potential travel market for local residents and employees and work with RIPTA to increase frequency. Explore ways to expand the new Route 67, the free Bellevue Trolley.   | Keep Newport Moving<br>(2022)                          | Policy                               | Lead: Department of<br>Resilience & Sustainability<br>(RIPTA Liaison)<br>Support: RIPTA   | Equity<br>Access<br>Mode-Shift<br>Environmental | Medium   |
| 1.2.e      | Revisit zoning to promote diverse housing  | <b>Revisit zoning</b> to allow for such residential forms that allow young adults and families, parents of grown children, and older adults to age in place on Aquidneck Island without relying exclusively on driving. Promote life-cycle housing options by encouraging denser village developments, cohousing communities, and accessory dwelling units (ADUs).   | Moving Forward RI<br>(2040)                            | Policy                               | Department of Building Zoning, & Inspections  | Equity<br>Mode-Shift<br>Environmental           | Long     |
| Strategy 2 | Increase Roadway Safety and Slow Speeds  |  |  |                                      |   |   |          |
| Action 2.0 | Develop a local Safety Audit procedure   | Develop a local safety audit procedure, consistent with national best practice, including a first phase community walk audit to assess existing perceptions of safety, risk factors and potential solutions with the public, and a second phase as part of the design process (i.e., Road Safety Audit of 60 percent plans) and in partnership with the design consultant team. The process should include an abbreviated flow for quick-build demonstration projects and a more expansive process for full reconstruction capital projects. Conduct Road Safety Audits on identified demonstration corridors, following these established procedures. This process should include opportunities for community input and generate quick-build demonstration solutions. |  | Process                              | Lead: Interdepartmental<br>Traffic Committee<br>Support:<br>Community Partnerships<br>Bicycle and Pedestrian<br>Advisory Commission               | Safety  | Short    |
| Action 2.1 | Implement quick build demonstration safety countermeasures and other immediate actions on the High Injury Network. |  |  |                                      |   |   |          |
| 2.1.a      | Identify quick build demonstration projects  | Based on opportunities such as repaving schedules and maintenance and implementation barriers such as jurisdiction and right-of-way, identify priority locations for quick build demonstration improvement projects on the High Injury Network. Identify one project per year to take through Actions 2.1.b. Begin with corridors under local control and with the largest number of fatal and severe crashes. Consider corridors with potential local partners such as schools or medical facilities, thus combining connections to population and institutions that could partner in project deployment.   | RI VRU Safety<br>Assessment 2023<br>Ride Island (2023) | Process<br>Infrastructure            | Lead: Newport City Council Support: Interdepartmental Traffic Committee Bicycle and Pedestrian Advisory Commission Hired Consultants Bike Newport | Safety  | Short    |
| 2.1.b      | Implement and monitor demonstration projects   | Implement and monitor quick-build improvements on identified demonstration corridors (in 2.1.a). Implementation should include education to share the benefits of safety countermeasures with the community and train road users on how to use potentially new infrastructure. Monitor the impact including data collection of crashes, multimodal volumes, speeds, personal stories, and photos. Publicize findings on the City website. While designed as quick builds, consider projects that could lead to permanent implementation. If feedback indicates that the desired benefits are not achieved, reconfigure as needed.  | RI VRU Safety<br>Assessment 2023                       | Infrastructure<br>Process            | Lead: Newport City Council<br>Support:<br>Newport Police Department<br>Communications Department<br>Hired Consultants                             | Safety  | Short    |
| 2.1.c      | Take immediate action on the High Injury Network   | Implement immediate action items High Injury Network-wide that do not need to be studied, planned, or designed - this may include maintenance (including pavement and restriping faded markings), speed limit signage, speed feedback signs, or sightline improvements (landscaping, spot parking restrictions).   |  | Infrastructure                       | Lead: Department of Public<br>Services – Public Works<br>Division<br>Support: Interdepartmental<br>Traffic Committee                              | Safety  | Short    |

| ID         | Title   | Safety Strategy/Action   | Related Plans or<br>Policies   | Policy / Process /<br>Infrastructure | Parties   | Related Goals | Timeline |
|------------|---|--|--|--------------------------------------|---|---------------|----------|
| Action 2.2 | Implement intersection safety countermeasures on the High Injury Network. |  |  |                                      |   |               |          |
| 2.2.a      | Intersection improvement program  | Build capital safety improvements at 30 intersections on the High Injury Network within 6 years. While long term reconstruction is being planned, pursue immediate changes, short-term actions, and interim improvements in accordance with Action 2.1. Capital safety improvement projects may include constructing more permanent versions of quick-build projects that tested and established a "footprint" for these capital projects.   | Rhode Island SHSP<br>2023-2027<br>RI VRU Safety<br>Assessment 2023   | Infrastructure                       | Lead(s): RIDOT & Newport City Council Support: Department of Public Services Hired Consultant   | Safety        | Medium   |
| 2.2.b      | Evaluate new traffic signals or pedestrian signals                        | Conduct a signal warrant analysis or signal infrastructure assessment to determine the feasibility of new signal installations. Based on that analysis, implement safety-oriented signal improvements, such as Right Turn on Red restrictions, the elimination of permissive left turns, removal of channelized right turns, upgrade to LED signals, install reflective backplates, etc. Consider priority locations for signal infrastructure assessment which may recommend traffic signal infrastructure reconstruction that would include the latest best practices, especially related to pedestrian signals and push-buttons. Consider priority locations for signal warrant analysis to determine feasibility of new signal installations, and/or Rectangular Rapid Flashing Beacons or Pedestrian Hybrid Beacons (PHBs). Note that most traffic signals in Newport are owned by RIDOT. | Keep Newport Moving<br>(2022)  | Infrastructure                       | Lead(s): RIDOT & Newport<br>City Council<br>Support: Hired Consultant   | Safety        | Medium   |
| 2.2.c      | Improve safety for motorcyclists  | Incorporate <b>motorcycle-specific design</b> measures such as high-friction surface treatments at curves and intersections, clear lane markings, motorcycle-friendly guardrails, and advanced warning systems to reduce crash risk and enhance rider safety.  |  | Infrastructure                       | Department of Public<br>Services  | Safety        | Medium   |
| Action 2.3 | Reduce speeds along the High Injury Network.                              |  |  |                                      |   |               |          |
| 2.3.a      | Evaluate intersection signal timing                                       | <b>Evaluate signal timing at top crash intersections.</b> Evaluate clearance intervals (i.e., yellows and all-reds) which can be a major contributing factor in angle and rear-end collisions at signalized intersections. Simultaneously ensure adequate pedestrian crossing times and the consideration of lead pedestrian intervals (LPIs) for locations with ped crashes or significant pedestrian volumes. Note that most traffic signals in Newport are owned by RIDOT.  | Keep Newport Moving<br>(2022)  | Process<br>Infrastructure            | Lead(s): RIDOT & Newport City Council Support: Hired Consultant   | Safety        | Short    |
| 2.3.b      | Evaluate corridor signal timing   | Evaluate signal timing on coordinated signal systems along corridors to ensure consistency with target speeds. Consider how cycle length changes and offset changes can help reduce corridor speeds. This can be done as part of a jurisdiction-wide optimization project. Note that most traffic signals in Newport are owned by RIDOT.   | Rhode Island Strategic<br>Highway Safety Plan<br>2023-2028   | Process<br>Infrastructure            | Lead(s): RIDOT & Newport City Council Support: Hired Consultant   | Safety        | Short    |
| 2.3.c      | Develop a traffic calming program   | Develop and implement a <b>traffic calming policy and program</b> , focused on local roads. Use both qualitative and quantitative data to identify high priority locations for safety projects near school zones, routes to schools, transit corridors, parks, and other youth-serving or older adult-serving facilities. Establish a typology for roadways that could be posted at 15 or 20 mph (i.e., functional class, AADT, land use context). Determine legislative allowance to lower speeds. Include signage and traffic calming infrastructure.  | Rhode Island Strategic<br>Highway Safety Plan<br>2023-2031<br>RI VRU Safety<br>Assessment<br>Rhode Island Complete<br>Street Action Plan<br>(2015)<br>Ride Island (2023) | Policy                               | Lead: Newport City Council Support: Hired Consultant Department of Public Services – Engineering Division Newport Police Department Bicycle and Pedestrian Advisory Commission Bike Newport | Safety        | Medium   |
| Action 2.4 | Design for safety for all users.  |  |  |                                      |   |               |          |
| 2.4.a      | Repair and improve crosswalks   | Conduct an audit to identify where Newport's marked crosswalks are degraded and require replacement and new crosswalks are needed to complete a comprehensive pedestrian network. Identify potential erroneous crosswalks in locations without relevant trip generators/destinations or without appropriate safety measures and consider removing.   | RI VRU Safety<br>Assessment<br>Rhode Island SHSP<br>2023-2027 (2022)   | Process                              | Lead(s): RIDOT Department of Public Services - Engineering Division Support: Hired Consultant Newport City Council Bicycle and Pedestrian Advisory Commission                               | Safety        | Medium   |

|------------|--|---|---------------------------------|--------------------------------------|---|---------------------------------------|----------|
| 2.4.b      | Conduct a sidewalk connectivity study  | Use capital funding to conduct a citywide <b>sidewalk connectivity study</b> that would evaluate land-use, density, future development plans, ROW, etc. to help prioritize segments that can evolve into capital improvement projects that not only address connectivity, but also <b>ADA compliance</b> (including transit accessibility). Address gaps in the pedestrian network, focused on <b>connectivity in high-traffic areas</b> , near schools, public transit stops, and community hubs. Prioritize historically underserved areas and populations. | RI VRU Safety<br>Assessment     | Process                              | Lead: Department of Sustainability & Resilience Support: Hired Consultant Newport City Council Bicycle and Pedestrian Advisory Commission                               | Safety<br>Equity<br>Access            | Medium   |
| 2.4.c      | Dedicate funding for sidewalk maintenance  | Review and potentially expand current funding for regular sidewalk maintenance and connections and crosswalk repairs identified in 2.4.a and b.   |                                 | Policy                               | Lead: Department of Public Services - Engineering Division Support: Newport City Council  | Safety                                | Short    |
| 2.4.d      | Clarify sidewalk clearance responsibilities and offer assistance   | Clearly outline municipal and state duties about <b>sidewalk clearance</b> and potentially fine those who are non-compliant. Investigate options for assisting those who are unable to comply with the policy. Explore opportunities for City to provide snow shovels and other tools on a loan basis to mediate potential cost barriers through a Community Lending Library.   | RI VRU Safety<br>Assessment     | Policy                               | Lead: Department of Building, Zoning & Inspections Support: Newport Public Library Community Partnerships Communications Department                                     | Safety                                | Short    |
| 2.4.e      | Increase awareness of sidewalk issue reporting   | Advertise the existing public reporting system (Report It! Newport!) to <b>report missing</b> , <b>damaged</b> , <b>or obstructed sidewalks</b> by marking locations on a map, uploading photos, and providing descriptions.  |                                 | Process                              | Communications Department   | Safety                                | Short    |
| 2.4.f      | Evaluate bus stop placement  | Coordinate with RIPTA to evaluate public <b>bus stop placement</b> , shelters, and pedestrian scale lighting through the lens of a rider. For example, adjust stops from nearside to far side stops to reduce pedestrian mid-block crossing threat.   | Bus Stop Design Guide<br>(2024) | Infrastructure                       | Lead(s): RIPTA Department of Resilience & Sustainability (RIPTA Liaison) Support: RIDOT Planning Department   | Safety<br>Mode-Shift                  | Medium   |
| 2.4.g      | Increase bus stop accessibility  | Enhance <b>bus stop accessibility</b> by implementing infrastructure upgrades aligned with best practices from the Bus Stop Design Guide, including ADA-compliant features, improved seating, shelter, and clear pedestrian pathways.   | Bus Stop Design Guide<br>(2024) | Infrastructure                       | Lead(s): RIPTA Department of Resilience & Sustainability (RIPTA Liaison) Support: RIDOT Planning Department   | Equity<br>Access<br>Mode-Shift        | Medium   |
| 2.4.h      | Support investment in Aquidneck Island's active transportation network   | Coordinated with Ride Island, advance the implementation of the Ride Island plan and identify the goals and schedule of <b>expansion of the connected</b> , <b>active transportation network</b> that provides low-stress infrastructure on designated roadways. Infrastructure may include context-sensitive bicycle and pedestrian facilities. Prioritize the development of bike lanes, pedestrian paths, and transit hubs along the High Injury Network.  | Ride Island Bike Plan<br>(2023) | Process<br>Infrastructure            | Lead: Aquidneck Island Municipalities Support: Community Partnerships Bicycle and Pedestrian Advisory Commission Department of Sustainability & Resilience Bike Newport | Safety<br>Mode-Shift<br>Environmental | Short    |
| 2.4.i      | Coordinate with Statewide Complete Streets policies and design recommendations   | Continue to support the development of <b>RIDSP Complete Street Plan &amp; Design Guidelines</b> .  Upon completion, incorporate street design guidance on local roads. Coordinate with RIDOT to advance safety investments on state-owned roadways and infrastructure.   | Moving Forward RI<br>(2040)     | Process                              | Planning Department   | Safety                                | Short    |
| Action 2.5 | Expand the "Ride to the Beach" route outlined in the Keep Newport Moving Plan to enhance connectivity, improve access to coastal destinations, and encourage sustainable transportation options. |   |                                 |                                      |   |                                       |          |
| 2.5.a      | Implement event traffic management that prioritizes multimodal safety  | Identify and expand traffic circulation and routes to mitigate congestion for multi-day festivals and events. Develop temporary bike and pedestrian routes to be used for the duration of the event.  Early win success: Newport Police Department worked in conjunction with Bike Newport to shut down traffic inbound to Fort for the US Open. Only bicycle traffic came in, at certain times. Police could use graphic support to further improve this process.  | Keep Newport Moving<br>(2022)   | Policy                               | Lead: Newport Police Department Support: Community Partnerships Communications Department Planning Department   | Safety<br>Access<br>Mode-Shift        | Short    |

# 7.2 Proven Safety Countermeasures

Under the FHWA's Proven Safety Countermeasures Initiative (PSCi), a series of 28 countermeasures and strategies to effectively reduce fatal and serious injury crashes was introduced (FHWA 2024) to stakeholders and the public during plan development. Each countermeasure provides a focused way to address at least one of the following safety areas:

- Speed management
- Intersection safety
- Roadway departures
- Pedestrians and bicyclists

Some of the countermeasures are also crosscutting, addressing several safety areas. The safety countermeasures are applicable across a wide spectrum of road types with applications for dense urban road networks, rural roads, less traveled two-lane state and county roads, signalized and unsignalized crossings, and horizontal curves, just to name a few. Considerations, applications, and expected safety benefits are provided for each countermeasure.

The City of Newport used these FHWA Proven Safety Countermeasures as a starting point to generate the projects provided in this Safety Action Plan.

# 7.3 Strategy and Project Selection

During the development of this Safety Action Plan, initial projects and strategies were identified and prioritized to provide an effective and transparent approach to improve safety within the transportation system.

The project team also used a prioritization matrix (Table 7) as a strategic tool for the City of Newport to evaluate and rank safety projects based on their impact and feasibility. The matrix provides a tool for assessing each priority project's (Figure 17) potential to address critical safety issues and its alignment with overall safety goals. By assigning scores or weights to various criteria (such as severity of risk, cost, and implementation timeline), the matrix will help identify high-priority projects that balance reactive and proactive strategies. The score or weight for each criterion was determined by local needs and priorities. Incorporating all of these elements in this Safety Action Plan's priorities will allow projects to meet the greatest safety challenges while meeting the priorities of the SS4A Program.

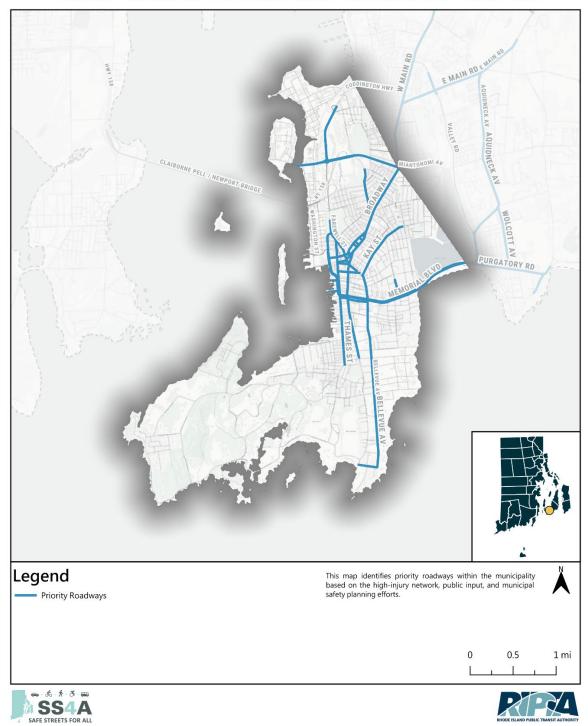

The top scoring and thus highest priority projects include:

- Broadway Admiral Kalbfus Road to Washington Square
- Memorial Boulevard America's Cub Avenue to Middletown town line
- America's Cup Avenue Farewell Street to Thames Street
- Bellevue Avenue Kay Street to Coggeshall Avenue
- Thames Street Farewell Street to Morton Avenue
- Touro Street Thames Street to Mt Vernon Street

# 8. Progress and Transparency

A process and tools for measuring progress and providing transparency were established with residents and other relevant stakeholders. Progress and transparency methods were developed for both the Safety Action Plan and for future use during implementation.

Biweekly meetings allowed progress to be tracked and reported to the broader group of stakeholders. Regular touchpoints were established with community leadership, who were invited to be involved in all major decisions. The project team also maintained quarterly and annual reporting on project progress throughout plan development in accordance with FHWA requirements for the SS4A grant.

To deliver on progress and transparency goals during implementation, the City of Newport is committed to providing the following on an ongoing basis:

#### Progress Measures:

- Annual Reporting: Regularly assess the progress made toward reducing roadway fatalities and serious injuries. This involves annual public and accessible reporting on the outcomes achieved through the Action Plan.
- Outcome Data: Provide relevant data or information measuring the impact of implemented strategies. This data-driven approach helps track improvements over time.

#### Transparency Measures:

- Public Posting: Make the Safety Action Plan available to the public by posting it online.
   Transparency ensures that residents, stakeholders, and interested parties can access this Safety Action Plan's details, including all regular updates.
- Ongoing Communication: Maintain an open line of communication with the community and stakeholders during updates, city hall meetings, and engagement sessions to foster transparency and build trust.
- Regular City Council Updates: Provide regular updates to keep the City Council current on activities and progress to share with constituents.

These progress and transparency measures provide a platform for ongoing accountability as this Safety Action Plan is implemented. These reports will capture the activities and progress since the previous reporting period. They will also be related directly to the actions, priority projects, and strategies provided in Chapter 7. Progress under each of these strategies will be documented and celebrated in these reports, ensuring that project success builds on previous activities and reporting.

Progress on Vision Zero implementation starts with the short-term actions. Table 8 contains the short-term actions listed in Table 6, organized chronologically by the target month, following the adoption of the Safety Action Plan, when the action should be implemented.

**Table 8. Short Term Actions, by Months to Complete** 

| Months to |            |  | Policy / Process          |   |
|-----------|------------|--|---------------------------|---|
| Complete  | ID         | Sub-Action Title   | / Infra.                  | Parties   |

## THE CITY OF NEWPORT

# RESOLUTION OF THE COUNCIL

# No. 2025-21

| Page 1 of 2 |   |  |  |  |
|-------------|---|--|--|--|
| WHEREAS:    | the life and health of all persons living and traveling within the City of Newport is our utmost priority, and no one should die or be seriously injured while traveling on local streets and roadways; and   |  |  |  |
| WHEREAS:    | the Center for Disease Control cites traffic crashes as among the leading cause of deaths in the United States; and   |  |  |  |
| WHEREAS:    | information provided by the Vision Zero Network, states that children, older adults, people of color, people with disabilities, people who are unhoused, and people with low income face a significantly disproportionate risk of traffic injuries and fatalities; and  |  |  |  |
| WHEREAS:    | Vision Zero is a holistic strategy aimed at eliminating all traffic fatalities and severe injuries suffered by all road users while increasing safe, healthy, and equitable mobility; and   |  |  |  |
| WHEREAS:    | streets and transportation systems have traditionally been designed to prioritize the efficient movement of motor vehicles, and Vision Zero supports a paradigm shift by designing streets and transportation systems to move people of all ages and abilities safely, including pedestrians, bicyclists, public transit users, scooter riders, and motorcyclists, as well as drivers and passengers of motor vehicles; and |  |  |  |
| WHEREAS:    | Vision Zero recognizes that people will sometimes make mistakes, so the road system and related policies should be designed to ensure that those inevitable mistakes do not result in severe injuries or fatalities. Transportation planners, engineers, and policymakers are therefore expected to improve the roadway environment, policies, and other related systems to lessen the severity of crashes; and             |  |  |  |
| WHEREAS:    | in addition to the "Green and Complete Streets Policy" adopted in June of 2021, the City of Newport has adopted "Keep Newport Moving", Newport's Transportation Master Plan in April of 2023, where Vision Zero was listed as a critical design and policy strategy to accomplish the goals listed within "Keep Newport Moving;" and  |  |  |  |
| WHEREAS:    | making streets safer for all people using all modes of transportation will encourage people to travel on foot, by bicycle, and by public transit, which supports a healthier, more active lifestyle and reduces environmental pollution; and  |  |  |  |
| WHEREAS:    | improvements to transportation conditions also reduces greenhouse gas (GHG) emissions, therefore increasing public health, and positively impacting economic  |  |  |  |

development, particularly for tourism-dependent communities such as Newport; and

#### THE CITY OF NEWPORT

# RESOLUTION OF THE COUNCIL

### No. 2025-21

Page 2 of 2

WHEREAS:

the State of Rhode Island has committed to the development of and adoption of an updated Complete Streets Plan and Design Guidelines by 2025, which establishes a statewide and municipal Complete Streets policy and prioritization method to inform project selection and delivery; and

WHEREAS:

a complete Vision Zero Safety Action Plan includes a leadership commitment to the eventual goal of zero roadway fatalities and serious injuries that includes either setting a target date to reach zero or setting one or more targets to achieve significant declines in roadway fatalities and serious injuries by a specific date; and

WHEREAS:

Vision Zero resolutions have been adopted by many jurisdictions across the United States; and

WHEREAS:

for Vision Zero to be accepted, it must be thoughtfully integrated into municipal procedures and embraced by community stakeholders, City Boards & Commissions, City Staff - including police and emergency services, school communities, neighborhood organizations, community groups, and the public at large. NOW THEREFORE BE IT

RESOLVED:

that the Council adopts, as follows:

The Vision Zero: Safe Streets for All goal of eliminating traffic deaths and series injuries on City Streets by 2034, and endorses Vision Zero as a comprehensive and holistic approach to achieving this goal; and

A commitment to establishing a continuous and evolving evaluation framework that includes regular analysis and tracking of the implementation progress of Keep Newport Moving and the supportive 2025 Safety Action Plan. This framework will involve the ongoing assessment and revision of strategies, actions and metrics to ensure progress toward the goal of eliminating traffic deaths and serious injuries by 2034.

# Newport commits to goal of zero serious traffic injuries or fatalities. Here's how

Savana Dunning
Newport Daily News

#### **Key Points**

Vision Zero is a term referring to the goal to eliminate all serious traffic injury and fatalities through roadway design and engineering.

The City of Newport identified Vision Zero as a goal it seeks to achieve in its Green and Complete Streets policy as well as its Transportation Master Plan.

Newport City Council committed to ensuring the success of its Vision Zero goal as a part of the process in getting a "Vision Zero Action Plan" in place, the final draft of which should be in by April.

Within the past five years, there have been four crashes on Newport's roadways that have resulted in death, and another 26 that have resulted in serious injury. While the small city's stats might not seem alarming, it is a part of a nationwide surge in traffic fatalities that began in 2020 and 2021.

As a part of a federal program designed to tackle this problem, the City of Newport has made an official commitment to the elimination of serious injury and fatalities on its roadways, a goal referred to as "Vision Zero," through regular crash analysis and systematic review of transportation planning efforts.

"Really, the underlying concept here is that humans make mistakes and they're vulnerable, and if a mistake is made on your streets, that shouldn't result in death," said Shawna Kitzman, a senior transportation planner with Toole Design, at Newport City Council's Feb. 12 meeting.

Kitzman and the team at Toole Design, a transportation design and planning firm with a location in Boston, are helping the city design a "Vision Zero Safety Action Plan," as a part of

a federal and state effort to accomplish the long-term goal of the complete elimination of serious traffic injury and traffic fatality on national, statewide and local roadways.

The term "Vision Zero" was introduced in 1997 in Sweden when the country adopted the long-term goal to eliminate the risk of serious injury and fatality resulting from traffic accidents. The approach supporting the goal, "Safe System," emphasizes the development of safer roadways to ensure traffic accidents are less severe, rather than focusing on prevention through traffic law enforcement.

Since 1997, other countries have been inspired by Vision Zero and adopted related policies of their own, including the United States. In 2022, the U.S. Department of Transportation released the National Roadway Safety Strategy, adopting the Vision Zero goal and implementing the Safe System Approach to achieve it. To support this new policy, the Infrastructure Investment and Jobs Act established the Safe Streets and Roads for All grant program, administered by USDOT's Federal Highway Administration, to fund regional and local initiatives related to the Vision Zero goal.

This is where Rhode Island comes in. The Rhode Island Public Transit Authority was able to secure a \$5 million grant through the federal program to develop a statewide action plan with the help of 31 participating municipalities, including Newport. As a part of this process, the municipalities will acquire their own Safety Action Plans, which are currently being drafted.

In order for the plan to move forward, it needed a show of commitment from municipal leaders to the effort, including a commitment to regular analysis and tracking of the progress of the plan as well as Newport's Transportation Master Plan: Keep Newport Moving. The resolution committing the council was approved by all Newport City Council members with the exception of Councilor Lynn Underwood Ceglie, who, in an unfortunate coincidence, was absent from that meeting because she was recovering from a minor car accident.

This is not the first time the term Vision Zero has been mentioned within Newport City Hall. In 2021, the city adopted a "Green and Complete Streets" policy, which encourages the use of multiple forms of transportation by accommodating these different types of transit, such as bicycling or walking, through roadway design. An "incomplete" road, therefore, is one that could be uncomfortable or even deadly for those not traveling in a car to use, according to Smart Growth America and the National Complete Streets Coalition. It's within this policy that the city first commits itself to the goal of "Vision Zero."

"It is the policy of the City of Newport to develop a safe, comfortable, reliable, efficient, integrated and completely connected multimodal transportation network providing access, mobility, safety, and connections to all users consistent with Vision Zero initiatives," the policy states.

This set a precedent further solidified by Keep Newport Moving, the Transportation Master Plan the city adopted in April 2023, which references adopting Vision Zero as the framework through which the city should approach traffic safety and recommends the city create a Vision Zero Action Plan.

# What's next?

With the council's commitment and support, the next steps for Kitzman and the city is completion of the Safety Action Plan, which is expected around April of this year. Once adopted, Kitzman said the city will be able to apply for federal grant money to implement the actions within the plan.

Kitzman is also helping Middletown and Portsmouth develop their Safety Action Plans, as the team believes in an Island-wide approach to the issue. Other strategies within the plan Kitzman addressed at the meeting includes slowing speeds, managing post-crash care and data transparency and increasing community commitment to the Vision Zero goal.

At the meeting, Councilor Xay Khamsyvoravong, who served as the city's mayor when council approved the Transportation Master Plan, said this was one of the most important items they had made a decision on that night.

"The feeling that you have when you drive by or walk up to an accident site, and you see a some vehicle smashed up, or maybe a bike smashed up, is absolutely horrifying, but the sense of relief you feel when you hear the voice of somebody on the other side, they might be pretty banged up but they're alive and they're cognizant and they're with it, you don't forget that and its important," Khamsyvoravong said. "That sense of relief should be the normal that we operate with in this community. We should be able to get from Admiral Kalbfus (Road) down to the Third Ward and Ocean Drive, whether it's on foot or on bike or by car, without fearing that sense of relief that we feel when we hear that person talking on the other side isn't going to be the norm."

# Rhode Island Public Transit Authority Safe Streets for All Survey (English)

Safety continues to be a concern for all travel modes in Rhode Island. Through the Federal Highway Administration (FHWA) Safe Streets for All (SS4A) program, the Rhode Island Public Transit Authority (RIPTA) secured funding to support the state and participating municipalities in planning for roadway infrastructure improvements that will prevent injuries and save lives. The SS4A planning project will be accomplished by creating municipal Safety Action Plans (SAPs) for 32 participating communities and a statewide Safety Action Plan. Please help the study team to identify areas of safety concern, where successful improvements have been made, and to understand the preferences of Rhode Islanders on effective safety improvement methods. The survey should take around 5-10 minutes to complete. Thank you for sharing your time and thoughts.

# **Appendix C: Baseline Crash Analysis**

The Descriptive Crash Analysis summarizes the findings from a review of data on the most recent 5 years of crashes that occurred in Newport.

### **Analysis Overview**

Crashes, especially serious crashes are not randomly occurring nor evenly distributed. The safety analysis, described on the following pages, uses data to identify key crash patterns, trends, and contributing factors in Newport, with a specific focus on crashes where someone died or was seriously injured. This analysis is based on 5 years of crash data (2019 to 2023) collected by enforcement agencies using the State of Rhode Island Uniform Crash Report form, paired with roadway and demographics data using spatial analysis. Together, this information identifies the types of infrastructure, behavior, and contexts that most impact safety performance.

#### Why focus on fatal and serious injury crashes?

In alignment with the Safe System Approach, the goal of the Safety Action Plan is to eliminate fatal and serious injuries on roads. To support that goal, the safety analysis focuses on crash patterns and factors of crashes where at least one person was killed or <u>seriously</u> injured (the person needed to be brought for medical attention). This excludes the most common type of crash, a property damage only crash, to focus instead on human safety impacts.

For less common crash types (e.g., crashes involving people walking), this analysis also highlights trends in crashes that led to <u>any injury</u>. By considering crashes resulting in any injury, a pattern of critical safety needs within the community becomes more apparent, despite a low sample size.

#### Why look at 5 years of crash data?

Crashes can fluctuate naturally from year-to-year based on road conditions, community circumstances, and more. A 5-year study period effectively balances changes in safety over time while capturing overall trends. The result is a safety analysis that is comprehensive and supports long-term decision-making.

### **Descriptive Crash Analysis Findings**

The Descriptive Crash Analysis presents an overview of the state of road safety within Newport, to pinpoint the regional and local factors that contribute to frequent and serious crashes. This analysis aims to create a shared understanding of the greatest needs and opportunities for safety improvement within the community.

This analysis answers questions like:

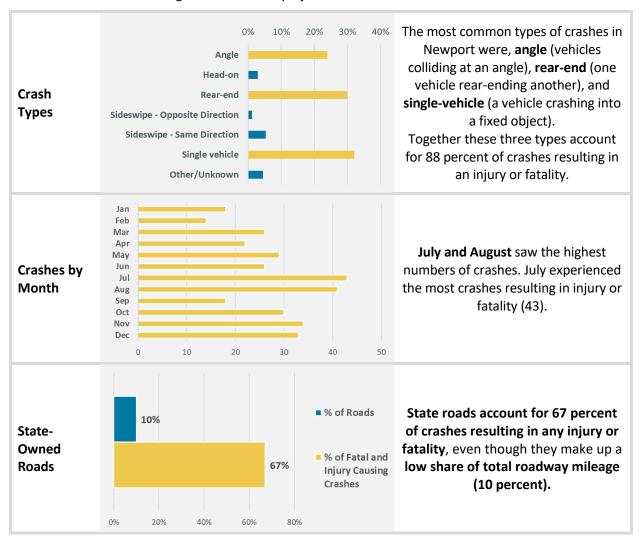

- How has crash frequency changed in recent years?
- How do crash patterns vary by road users' modes of travel?
- What behaviors and environmental factors are most prevalent among severe crashes?
- How do safety outcomes correlate with factors such as poverty or transportation access?

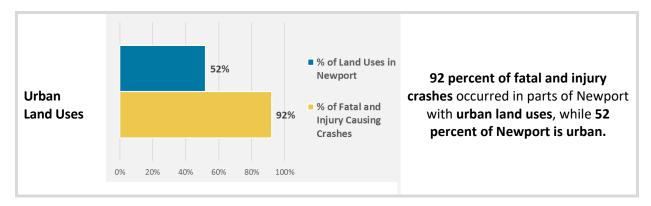

What roadway and environmental attributes influence safety outcomes?

#### **Key Takeaways**

In Newport, according to the 5-year (2019 to 2023) crash dataset used for the Safety Action Plan, 12 percent of all crashes led to someone being killed or injured (334 crashes) and 30 (1 percent) of these crashes led to someone being killed or seriously injured.

#### **Overall Crash Statistics**

In Newport, in the 5-year crash dataset used for the Safety Action Plan, there were:

- Total Crashes: 2,778
- Total Fatal and Injury (FI) Crashes: 334 (12 percent of all crashes)
- Total Fatal and Serious injury-causing (FSI) Crashes: 30 (1 percent of all crashes)
  - 9 involving vulnerable road users (VRU) 3 involving bicyclists; 6 involving pedestrians (Newport has the 3<sup>rd</sup> highest rate of bicycle-involved fatal and <u>serious</u> injury-causing crashes and 8<sup>th</sup> highest rate of pedestrian-involved fatal and <u>serious</u> injury-causing crashes per capita of 39 municipalities in Rhode Island)
  - o 9 involving motorcyclists only
  - o 12 involving motorists only
  - 1.19 bicycle-involved fatal and <u>serious</u> injury-causing crashes per 10,000 people (Newport has the 8<sup>th</sup> highest rate statewide)

Figure 18 illustrates the number of crashes resulting in any injury or fatality, per year, in Newport compared to statewide. After a peak of 78 fatal and injury crashes in 2019, and a subsequent dip to 49 crashes in 2020, crashes remained stable in the years between 2021 and 2023, at 63 to 76 crashes resulting in any injury or fatality per year. More recently, in 2022, crashes resulting in any injury or fatality increased to 76.

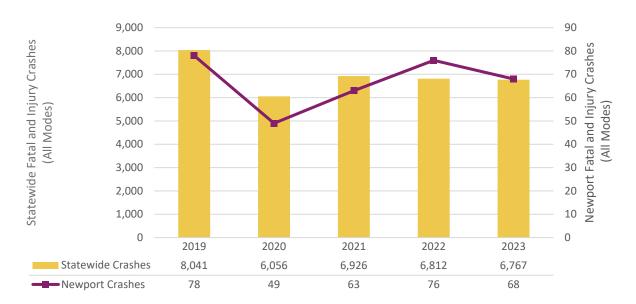

Figure 18. Newport versus Statewide Crashes Resulting in an Injury or Fatality, by Year, All Modes (2019-2023)

There were 61 crashes resulting in any injury or fatality between 2019 and 2023 involving **someone walking or bicycling** (vulnerable road users). Generally, the average number of crashes resulting in any injury or fatality involving pedestrians or bicyclists fluctuated between 10 and 12 crashes per year, with 2019 as an outlier at 17 crashes.

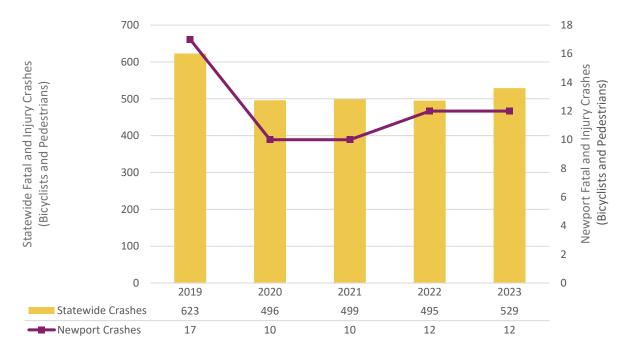

Figure 19. Newport versus Statewide Crashes Resulting in an Injury or Fatality, by Year, Walking and Bicycling (2019-2023)

Figure 20 illustrates the severity of crashes by road user modes. Road users are differently susceptible to being killed or injured when they are involved in a crash. **Sixty-nine (69) percent of pedestrian crashes and 67 percent of bicycle crashes** led to someone being killed or injured.

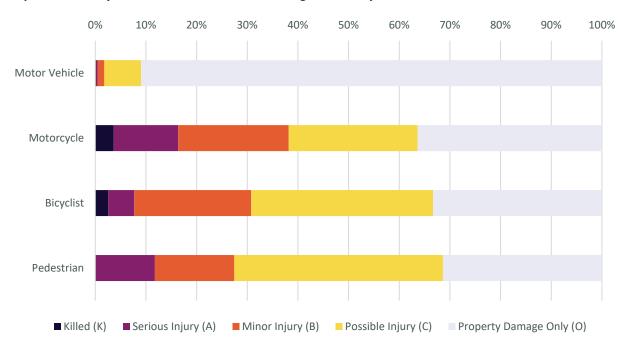

Figure 20. Newport Crashes, by Mode and Severity (2019-2023)

# **What Types of Crashes Occur?**

Figure 21 illustrates fatal and injury crashes in Newport by type, meaning how the vehicles or road users involved collided. The top crash types in fatal and <u>serious</u> injury-causing-causing crashes were <u>single-vehicle</u> and <u>angle</u> crashes, which accounted for 80 percent of crashes. Rear-end, angle, and single-vehicle were the top crash types resulting in any injury or fatality, accounting for 86 percent of crashes.

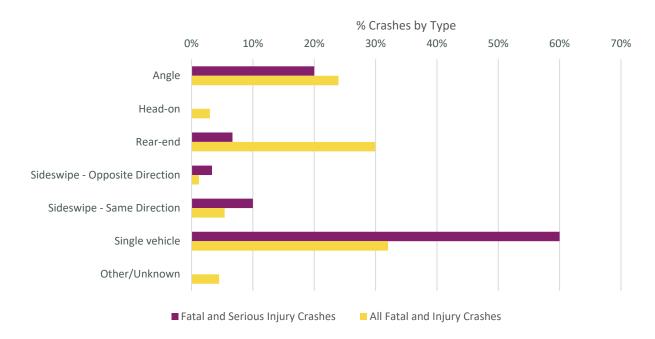

Figure 21: Newport Crashes, by Type and Severity, All Modes (2019-2023)

Figure 22 illustrates that in Newport the top reported contributing factors in fatal and <u>serious</u> injury-causing-causing crashes were **unrestrained drivers**, **out-of-state drivers**, and **senior drivers**. Out-of-state drivers were also a top contributing factor in crashes resulting in any injury or fatality. These factors are based on police reports and give insight as to what may have influenced the severity of crashes.

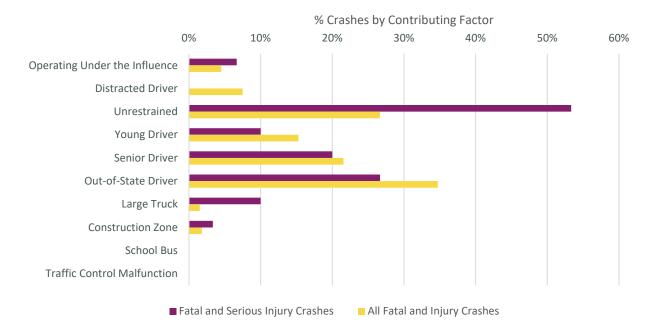

Figure 22. Newport Crashes, by Contributing Factor and Severity, All Modes (2019-2023)

#### When Do Crashes Occur?

In Newport, crashes resulting in any injury or fatality were more frequent during the **summer months, particularly in July and August**, which saw the highest numbers of crashes. July experienced the most crashes resulting in injury or fatality with 38 crashes. Motorcycle-involved crashes were most frequent from May to August, peaking in July. Crashes involving bicyclists were higher in the spring and summer, particularly in May and June. Pedestrian crashes were relatively consistent throughout the year (Figure 23).

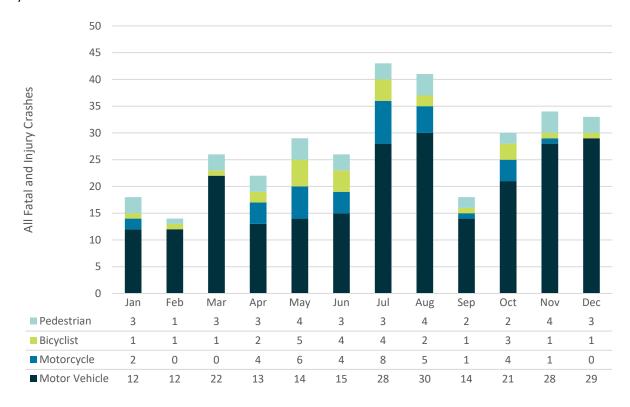

Figure 23. Newport Crashes Resulting in an Injury or Fatality, by Month by Mode (2019-2023)

Table 9 illustrates that crashes resulting in any injury or fatality were more frequent **on all weekdays** between **3 PM to 6 PM**, reflecting afternoons when a large number of people are traveling.

Table 9. Newport Crashes Resulting in an Injury or Fatality, by Time of Day and Day of Week, All Modes (2019-2023)

| Day of<br>Week | 12 AM to<br>3 AM | 3 AM to 6<br>AM | 6 AM to 9<br>AM | 9 AM to<br>12 PM | 12 PM to<br>3 PM | 3 PM to 6<br>PM | 6 PM to 9<br>PM | 9 PM to<br>12 AM |

| Tuesday        | 3                | 0               | 6               | 9                | 8                | 16              | 4               | 1                |
| Wednesday      | 1                | 1               | 7               | 5                | 10               | 13              | 4               | 5                |
| Thursday       | 2                | 0               | 8               | 4                | 7                | 11              | 7               | 3                |
| Friday         | 4                | 0               | 6               | 8                | 11               | 18              | 7               | 4                |
| Saturday       | 7                | 1               | 1               | 7                | 9                | 9               | 8               | 5                |
| Sunday         | 5                | 0               | 2               | 2                | 10               | 9               | 8               | 4                |

Figure 24 illustrates that the largest share of all crashes resulting in any injury or fatality occurred during daylight conditions (71 percent), likely when more travel occurs. Twenty-eight (28) percent occurred during dark-lit (17 percent), dark-unlit (6 percent), and twilight (5 percent) conditions. This trend indicates a potential need to evaluate roadway lighting conditions in Newport to ensure roads are appropriately lit during dark and twilight conditions. It is important to note that data on lit versus unlit conditions comes from police reports and reflects the presence of streetlights, not the adequacy of lighting conditions for visibility.

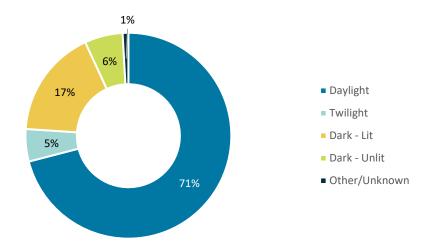

Figure 24. Newport Crashes Resulting in an Injury or Fatality, by Lighting Condition, All Modes (2019-2023)

Figure 25 highlights that a large share of all crashes resulting in any injury or fatality involving bicyclists and pedestrians occurred during daylight conditions (74 percent) and dark-lit conditions (13 percent).

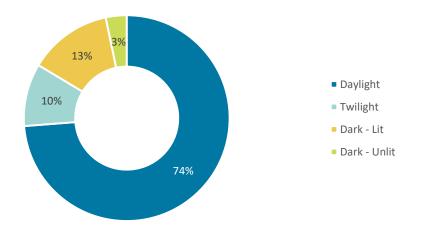

Figure 25. Newport Crashes Resulting in an Injury or Fatality, by Lighting Condition, Walking or Bicycling (2019-2023)

Figure 26 illustrates that a large share of all crashes resulting in any injury or fatality occurred during **clear weather conditions (84 percent).** Nine percent occurred during rain or winter weather. This trend does not mean that inclement weather conditions are somehow safer; rather, likely most travel occurs during clear or dry conditions.

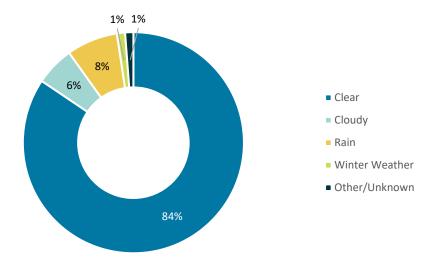

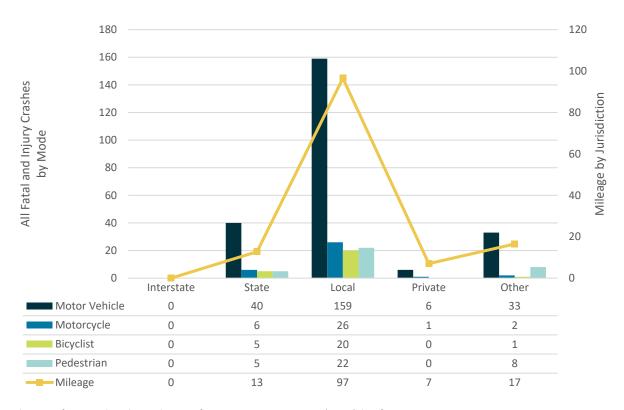

Figure 26. Newport Crashes Resulting in an Injury or Fatality, by Weather Condition, All Modes (2019-2023)

#### Where Do Crashes Occur?

A greater number of fatal and <u>serious</u> injury-causing crashes occurred on **local roads** and on **intersections** (for non-motorized modes) and midblock locations (for motorized modes) compared to other road types and intersections.

Crashes resulting in any injury or fatality occurred disproportionally on **local roads**. Local roads had a higher number of crashes resulting in any injury or fatality (227 crashes; or 68 percent of fatal and injury crashes), and they make up a larger amount of the total roadway mileage in Newport (73 percent). **State roads** account for 56 crashes (67 percent) resulting in any injury or fatality, even though they make up a lower share of total roadway mileage (10 percent). Note that "Other" roads are likely also local roads or military roads that were not correctly categorized in the data.

Road owner information based on Highway Performance Monitoring System (HPMS) data for 2023

Figure 27. Newport Crashes Resulting in an Injury or Fatality, by Mode and Road Owner (2019-2023)

In Newport, a large share of crashes resulting in any injury or fatality occurred at intersections across all modes. Fifty-seven (57) percent of motorcyclist-involved and 50 percent of bicyclist-involved crashes resulting in any injury or fatality occurred at an intersection (Figure 28).

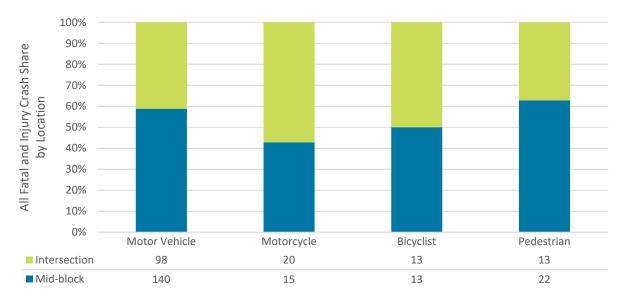

Figure 28. Newport Crashes Resulting in an Injury or Fatality, by Location and Mode (2019-2023)

Medium-volume roads (1,000 to 10,000 average daily vehicles) accounted for 63 percent of motorcyclist-involved, 50 percent of bicyclist- involved, and 39 percent of motorist-involved crashes resulting in any injury or fatality (Figure 29).

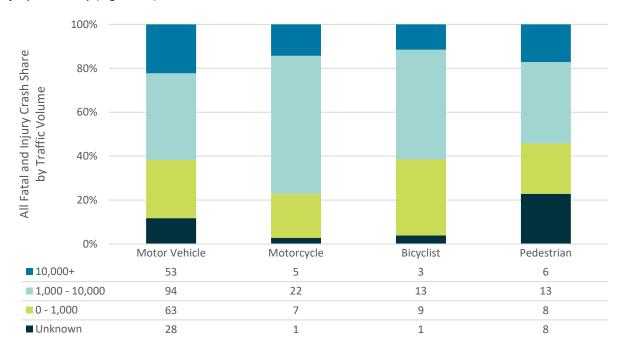

Figure 29. Newport Crashes Resulting in an Injury or Fatality, by Traffic Volume and Mode (2019-2023)

Figure 30 illustrates the injury or fatality-causing crashes by mode and roadway lane type. **Ninety-eight** (98) percent of roads in Newport are **two-lane roads**, and the remainder of these roads, 2 percent, are freeways. **Eighty-seven (87)** percent of crashes resulting in any injury or fatality occurred on **two-lane roads**.

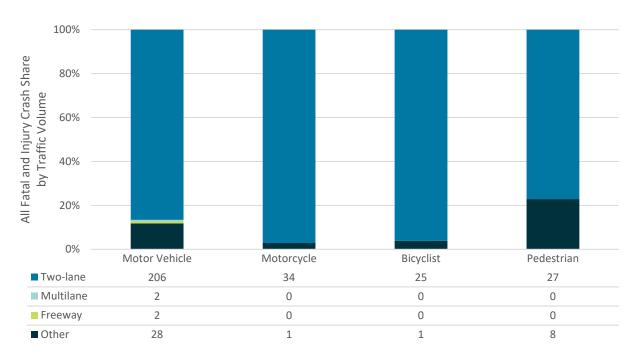

Figure 30. Newport Crashes Resulting in an Injury or Fatality, by Lane Type and Mode (2019-2023)

**Ninety-two (92)** percent of crashes resulting in any injury or fatality are in areas with **urban land uses**, which represent 52 percent of Newport's area composition (Figure 31).

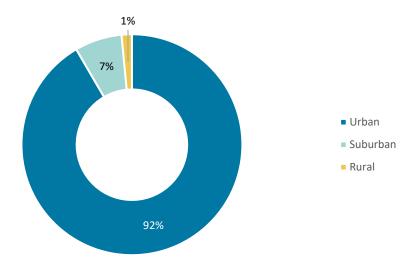

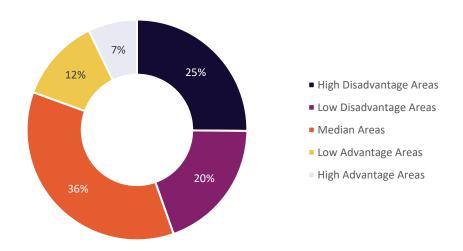

Figure 31. Newport Crashes Resulting in an Injury or Fatality, by Land Use Type (2019-2023)

**Forty-five (45)** percent of crashes resulting in any injury or fatality occurred in **high and low disadvantaged areas**. This is slightly greater than the overall make up of Newport, where 32 percent of the municipality is identified as high and low disadvantaged areas (Figure 32).

Communities of Disadvantage information based on Justice40

Figure 32. Newport Crashes Resulting in an Injury or Fatality, by Communities of Disadvantage (2019-2023)

### Who Are Involved in Crashes?

A high proportion of **female drivers ages 15 to 24, 25 to 34, and 35 to 44** were involved in crashes resulting in any injury or fatality compared to other age/gender groups (Figure 33).

Note, crash reports only collect demographic information that covers the road users' age and gender. Insights into additional demographic information such as race and ethnicity can be gathered through other types of analysis that look at the demographics in the place the crash took place.

Figure 33. Portsmouth All Crashes Resulting in an Injury or Fatality, by Age Group and Gender (2019-2023)

# 1. Introduction

This document provides an overview of the technical approaches used to perform the key data analyses in support of the Rhode Island Public Transit Authority (RIPTA) Safe Streets and Roads for All (SS4A) municipal safety action plans. Draft analysis methods were determined collectively with AECOM and RIPTA at the onset and were executed and refined over the course of the project, responding to changing data, timelines, and project needs. Results of analyses are detailed in the main body of municipal safety action planning documents.

# 2. Analysis Data

Key datasets from Rhode Island Department of Transportation (RIDOT), U.S. Department of Transportation (USDOT), and others provided the basis for all safety analyses. These are summarized in Table 1.

**Table 1. Key Datasets**

#### 2.1 Land Use Context

Given the nuances involved in defining land use context and the impact of these distinctions on safety performance, the project team used the National Land Cover Database from the U.S. Geological Survey (USGS) to produce project-specific definitions for urban, suburban, and rural context areas. To produce context-sensitive analyses and inform interpretation of results, crashes and roadway networks were assigned a land use context definition. The data's 0.5-mile tiles were analyzed to determine relative coverage of various development densities, identifying medium- and high-intensity development areas and calculating an urban percentage metric. Based on this, each 0.5-mile tile was categorized as rural, suburban, or urban when the urban percentage metric is between 0 percent and 15 percent, 15 percent and 50 percent, or 50 percent and 100 percent, respectively.

This analysis identifies urban cores in and around Providence, Warwick, Newport, and more, which are surrounded by strips of suburban areas. The resulting context-area definition assignments were validated based on internal review, comparison to similar context area studies in the United States, and local knowledge. The context results were also tested during later analysis stages to ensure the distinctions served to further understanding of existing conditions.

Roadway segments often intersect with multiple context areas; in these instances, spatial relationships served to determine the context assignment: the context area category with the largest overlap was assigned to the roadway segment, as shown on Figure 1. Crashes were assigned to the context area category with which the crash point intersects.

### 2.2 Crash Geocoding

Rhode Island crash data were geocoded to improve location accuracy and ensure consistency, addressing issues in the original data caused by imprecise coordinates and incomplete datasets. Crashes were categorized by location type—address-based, intersection-based, or intersection-offset—and processed using standardized methods to achieve reliable spatial positioning. In the original data, approximately 69 percent of crashes were geolocated using latitude and longitude information, though some crash locations proved to be unreliable. After the re-geocoding process, approximately 89 percent of crashes were successfully geolocated and provided a reliable foundation for later analyses.

The geocoding effort enabled a more precise understanding of where crashes occur, allowing detailed analysis and serving to better inform the decision-making processes inherent to transportation safety planning. By ensuring accurate location data, the project helps to identify high-risk areas, assess trends, and develop targeted interventions to improve roadway safety as part of the Safe Streets Action Plan.

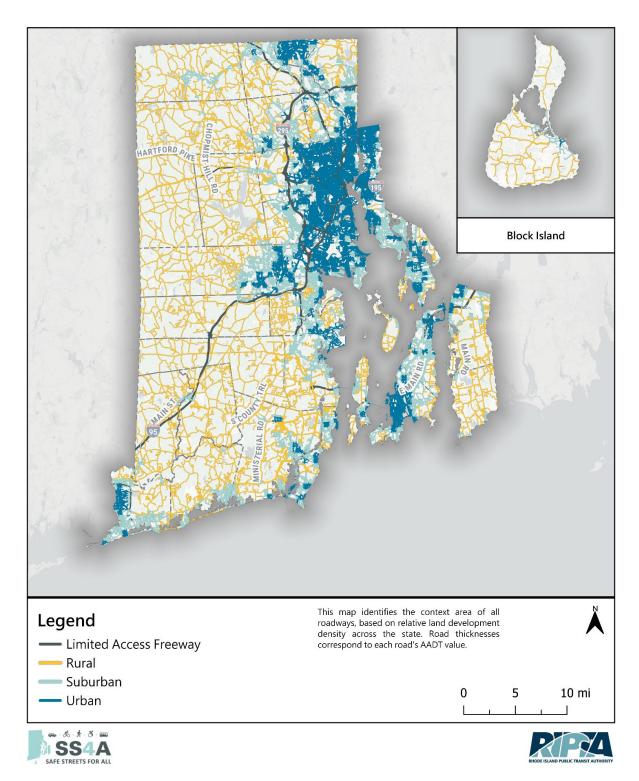

Figure 1. Context Area Assignment on Roadway Network

# 3. Crash Density Heatmaps

The crash density heatmaps represent the concentrations of crashes in the 2019 through 2023 study period at the municipal and statewide levels. Standard QGIS symbology was used to depict areas of high relative density within each municipality; a search radius of 1,000 feet produced meaningful insights that were also legible on the maps. The crash density heatmaps provide context on crash distribution in future analyses and preserve the anonymity of the crash data. Crash density heatmaps are available for all modes of crashes with severities of fatal and serious injury (FSI) and fatal and injury (FI), as well as for vulnerable road user (VRU) crashes with severities of FSI and FI.

# 4. Baseline Crash Analysis Exhibits

The baseline crash analysis is the starting point for all downstream analyses, providing an overview of study area-wide safety performance characteristics during the 2019 through 2023 study period. This analysis evaluates historical crash data, summarizing it using several different crash data attributes, such as crash mode, causation, temporal patterns, and more. The results are captured in spreadsheet files. Within each municipality's spreadsheet file, a tab provides an overview of the content, with additional analysis results tabs that feature multiple tables and figures on a selection of analysis topics. These results are summarized in Table 2, listing the topic areas covered, the key crash and other data attributes analyzed under each topic, and the data sources used for the analyses.

**Table 2. Baseline Crash Analysis Exhibits Content Overview** 

| Topic Area                          | Crash Attributes  | Other Data                   | Data Sources   |

# 5. Baseline Crash Analysis Maps

The baseline crash analysis maps are the result of a reactive, crash density-based analysis of roadways. This analysis, based on a modified sliding window analysis approach, smooths crash data across corridors, clearly depicting roadway network segments with relatively high densities of crashes during the 2019 through 2023 study period, with a particular emphasis on high severity crashes. This is achieved through a sequence of analysis steps:

- Roadway segmentation
- Crash assignment and segment scoring
- Percentile ranking and selection
- Post-processing of minor roads

Crashes from the 2019 through 2023 study period were successfully geolocated and assigned to a roadway location. The analysis was conducted first across all crash modes, namely motor vehicles, motorcycles, bicyclists, and pedestrians, and then repeated for exclusively VRUs, including all crashes that involved at least one pedestrian or bicyclist.

### 5.1 Roadway Segmentation

First, all roadways across the state of Rhode Island were segmented to achieve consistent segment lengths within each context area of urban, suburban, rural, and access-controlled freeways. This was done by first dissolving all roadway geometries by street name, municipality, and context area. These corridors were then segmented using standard lengths, which differed depending on the context area, summarized in Table 3, to produce context-sensitive results during later analysis steps.

| Table 3. Roadway Re- | segmentation | Lengths by | Context Area |
|----------------------|--------------|------------|--------------|
|----------------------|--------------|------------|--------------|

| Context Area               | Segment Length | Purpose  |
|----------------------------|----------------|--|
| Urban                      | 0.25 mile      | Short segments reflect the dynamic, dense environments of    |
|                            |                | urban areas  |
| Suburban                   | 0.50 mile      | Medium segments reflect the hybrid context of suburban areas |
| Rural                      | 1.00 mile      | Long segments reflect the sparse networks of rural areas and |
|                            |                | effectively capture sparse crash patterns                    |
| Access-Controlled Freeways | 1.00 mile      | Long segments capture crash patterns along high-speed        |
|                            |                | freeways   |

## 5.2 Crash Assignment and Segment Scoring

Once roadways were segmented, all study period crashes were assigned to roadway segments. To capture patterns that continued through intersections, and to account for inaccuracies in exact crash geolocations, each crash was assigned to all segments within 100 feet of the crash's geocoded location. To focus the analysis on patterns of high severity crashes, crashes were assigned a score based on the highest severity injury in the crash. Both fatal (K) and incapacitating injury (A) crashes were assigned a score of 3, minor injury (B) crashes were assigned a score of 2, and possible injury (C) crashes were assigned a score of 1, while property damage only (O) crashes were excluded from the analysis. This scoring is summarized in Table 4.

**Table 4. Crash Severity Scores** 

| Severity Level | Description           | Score |
|----------------|-----------------------|-------|
| K              | Fatal                 | 3     |
| A              | Incapacitating Injury | 3     |
| В              | Minor Injury          | 2     |
| С              | Possible Injury       | 1     |
| 0              | Property Damage Only  | 0     |

To generalize patterns of discrete crash locations across continuous roadway corridors, the project team applied a modified sliding window analysis, smoothing data across adjacent segments. This approach distributed the score associated with each crash between the segment the crash was assigned to as well as two segments on either side. The relative portion of the crash score assigned to each segment varies by its distance from the center segment and decreases linearly. This creates a pyramid-shaped distribution of each crash's score across up to five adjacent segments, as visualized in Figure 2. These distributed crash scores were then totaled and used as the final crash score for the given segment.

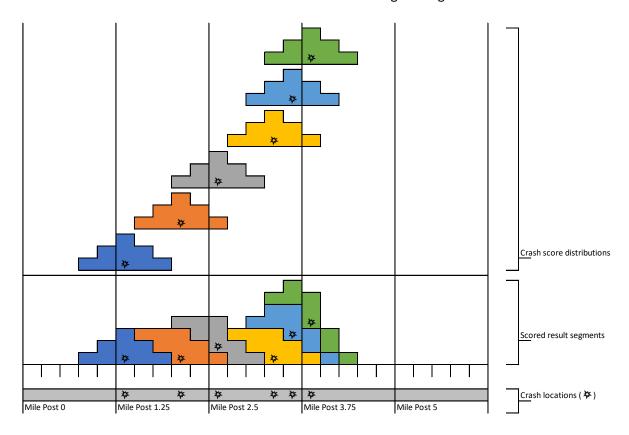

Figure 2. Sliding Window Analysis and Crash Distribution Schematic

### 5.3 Percentile Ranking and Selection

Once the sliding window analysis process was complete, the results were analyzed based on distributed crash scores to identify the top scoring roadway segments based on the distributed crash scores within each municipality. A percentile ranking was computed for each segment within each context area and each

municipality, then the top 15 percent of all roads were selected, as visualized in Figure 3. Breaking the ranking process out by municipality and context area ensures that every municipality is compared only against itself to determine the final target roadways, rather than comparing roadways in different context areas. Approximately 15 percent of each municipality's roadway network was selected as the final target roads, including 15 percent within each context area where adequate crash data exist (e.g., municipal networks in a context with zero crashes resulted in no target roads).

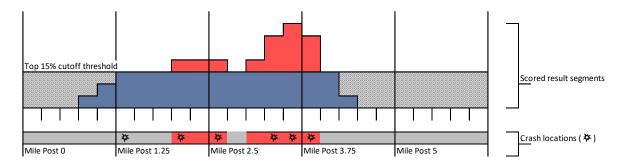

Figure 3. Percentile Ranking of Distributed Crash Scores

### 5.4 Post-Processing of Minor Roads

Because a crash is assigned to all roadway segments within 100 feet of the crash point, minor streets that branch off from major corridors tend to receive higher scores than they would otherwise, due to the high number of severe crashes at intersections with the major corridor. These minor streets can be removed from the target networks to make the major corridor the focus of the recommendations and treatments. For this reason, a post-processing step was added to remove minor streets that scored in the top 85th percentile due to intersection clusters of severe crashes. This process was not performed in municipalities with fewer than 10 crashes involving VRUs.

# 6. Risk-Based Analysis

This section documents the methodology and results of the risk-based network analysis process conducted to supplement the baseline crash analysis and mapping process outlined above. This systemic analysis builds on the reactive, crash-based approach to identify roadway facilities with the greatest potential for safety improvements by identifying combinations of roadway attributes that are associated with high frequencies of severe crashes. The results of this analysis, combined with the baseline crash analysis mapping results, produced the final high-injury network.

### **6.1** Systemic Screening Factors

One of the key outcomes of the systemic safety analysis process is the identification of roadway facility attributes that correlate with high crash frequency. These attributes are also known as systemic screening factors. Combinations of these factors can help flag roadway facility profiles associated with high crash frequencies. Notably, the presence of these factors does not necessarily indicate a causal relationship, nor that individual factors must be the target of treatments. For example, though the presence of nearby VRU generators may be a factor that correlates with elevated VRU crash frequencies, this does not mean that

these generators should be removed. Instead, facilities near such generators may require additional support through safety investments.

Screening factors and roadway facility profiles should be studied from a practical and policy-driven perspective to determine what components may be reasonable targets of safety improvements and which should be viewed primarily as non-causal correlations.

Table 5 includes all roadway segment attributes that were identified as candidate factors for consideration in the analysis. Factors considered in the final analysis were limited by data quality and availability.

**Table 5. Systemic Screening Factors Analyzed** 

| Screening Factor  | Description                                 |
|---|---|
| Roadway Jurisdiction  | State, Local, or Other (Unknown or Private) |
| Lane Configuration  | Two-lane, Multilane                         |
| Traffic Volume Range (Average Annual Daily Traffic)             | 0 - 1,000, 1,000 - 10,000, 10,000+          |
| Proximity to a School   | Within 0.25 Mile, Not Within 0.25 Mile      |
| Proximity to a Public Park                                      | Within 0.25 Mile, Not Within 0.25 Mile      |
| Percent of Population with Income Below 2x of the Poverty Level | Under 20%, 20-40%, Over 40%                 |
| Percent of Households with Zero Vehicles                        | Below 10%, 10-20%, Over 20%                 |
| Percent of Population Aged 65 or Older                          | Below 10%, 10-20%, Over 20%                 |
| Percent of Population Aged Below 18                             | Below 10%, 10-20%, Over 20%                 |

### 6.2 Analysis Process

As with the baseline crash analysis, the systemic analysis focused on the study period of 2019 through 2023. The target study roadway facilities include public roadways in the state of Rhode Island, excluding access-controlled freeways and related ramps. The analysis used the same crash scoring system as the baseline crash analysis, as summarized in Table 4.

The systemic analysis screening process is based on a decision tree machine learning algorithm in which each factor is screened individually to determine whether it can distinguish between locations with relatively high or low average crash densities per mile. For categorical factors such as roadway jurisdiction, the algorithm considers each unique classification individually. The algorithm screens all factors recursively to identify the most correlated, mutually exclusive sets of risk factors, resulting in several decision tree leaves, known in this analysis as facility profiles. Figure 4 illustrates the decision tree algorithm where multiple correlated factors define a facility profile.

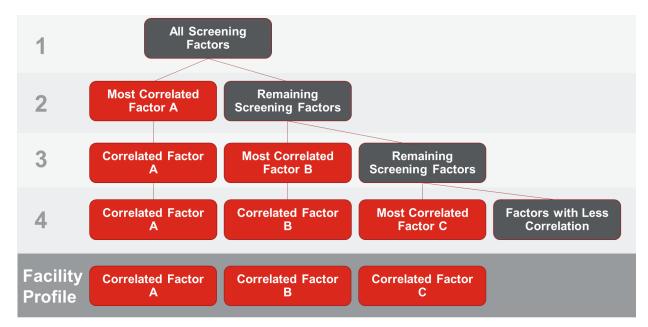

Figure 4. Illustration of the Decision Tree Process for Screening Combinations of Crash Risk Factors

### 6.3 Analysis Results

The following pages include risk-based analysis results, which are organized by context classification, first by all modes, and then by VRUs. Tables and figures outline the unique risk factors and priority rankings associated with each facility profile. Each subsection provides definitions of unique facility profiles identified by the analysis and their associated risk factors and statewide crash score and mileage metrics associated with these profiles. Profiles are grouped into five tiers, including Critical, High, Medium, Low, and Minimal, highlighting the facilities that are associated with the highest to lowest risk for severe crashes based on combinations of risk factors. Based on these profiles and their tiers, the project team was able to identify which roadway segments were associated with high levels of crash risk for each mode.

#### 6.3.1 All Modes – Urban Context

This section presents risk-based facility profile analysis models for crashes of all modes on all roadways within an urban context in Rhode Island, excluding access-controlled freeways and ramps. The analysis was conducted using severity-weighted fatal and injury crashes.

Table 6. All Modes Facility Profile Tier Definitions, Urban Context

| Facility Profile<br>Tier | Traffic Volume<br>Range (AADT) | % Zero Vehicle<br>Households | Roadway<br>Jurisdiction | % Population<br>Below 2x<br>Poverty Level | Within 0.25<br>Mile of School |
|--------------------------|--------------------------------|------------------------------|-------------------------|---|-------------------------------|

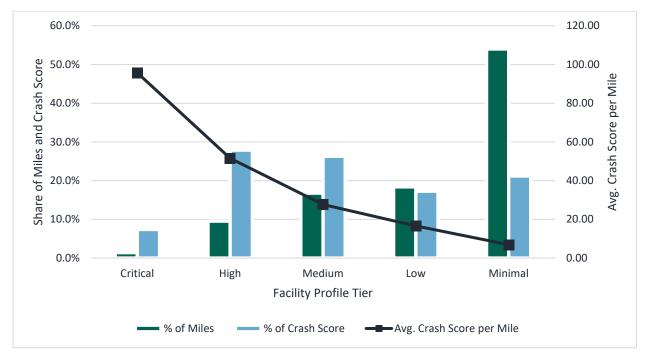

Figure 5. All Modes Facility Profile Tier Summary, Urban Context

### 6.3.2 All Modes – Suburban Context

This section presents risk-based facility profile analysis models for crashes of all modes on all roadways within a suburban context in Rhode Island, excluding access-controlled freeways and ramps. The analysis was conducted using severity-weighted fatal and injury crashes.

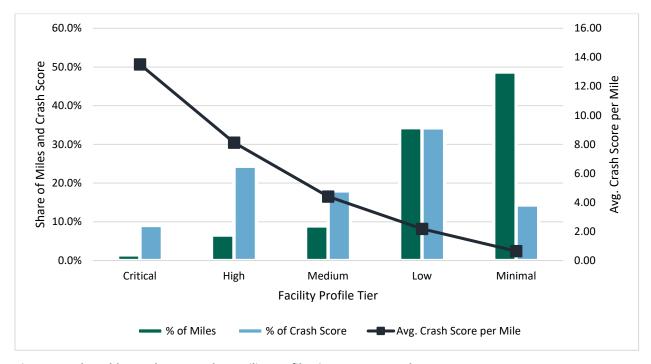

Figure 8. Vulnerable Road User Modes Facility Profile Tier Summary, Urban Context

#### 6.3.5 Vulnerable Road User Modes – Suburban Context

This section presents risk-based facility profile analysis models for crashes of VRU modes on all roadways within a suburban context in Rhode Island, excluding access-controlled freeways and ramps. The analysis was conducted using severity-weighted fatal and injury crashes.

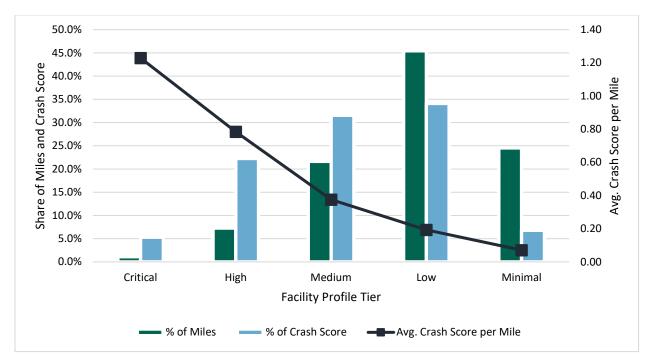

Figure 9. Vulnerable Road User Modes Facility Profile Tier Summary, Suburban Context

# **6.4** Top Tier Identification

Typically, Critical, High, and Medium risk tiers are automatically included in the development of an HIN. However, due to the varying mileage of different tiers of roads within each municipality, analysis results for each were reviewed individually to identify the number of tiers to include in each municipality's HIN. The review aimed to capture approximately 10 percent to 20 percent of each municipality's mileage within the top selected tiers, for both all modes and VRU modes models. The selection of risk tiers per model by municipality is summarized in Table 16.

Table 16. Top Risk Tiers by Municipality and Mode Group

| Municipality    | Selected All Mode Tiers | Selected VRU Mode Tiers |
|-----------------|-------------------------|-------------------------|
| Barrington      | Critical, High, Medium  | Critical, High, Medium  |
| Bristol         | Critical, High          | Critical, High, Medium  |
| Burrillville    | Critical, High          | Critical, High, Medium  |
| Central Falls   | Critical                | Critical                |

| Woonsocket       | Critical                | Critical                |

# 7. High-Injury Network

The final component of the safety analysis is the creation of the HIN, which combines the results of both the sliding window analysis and the risk analysis. The HIN uses the same segmentation as the sliding window analysis, with 0.25-mile segments for urban roads, 0.5-mile segments for suburban roads, and 1.0-mile segments for rural roads and access-controlled freeways. By combining the two analyses into one final roadway layer, the HIN communicates a holistic assessment of the need for intervention, based on final crash scores and risk tiers of each segment.

Final designation of inclusion in the HIN depends on the results of the baseline crash analysis and risk-based analysis for both all modes and VRU modes analyses. Each roadway segment falls into one of four categories:

- **Reactive**: Segments that appear on the baseline crash analysis maps based on a top 15 percent crash score for the given mode and municipality.
- Proactive: Segments that appear in the top risk tiers for the given mode and municipality.
- Reactive and Proactive: Segments that satisfy both the reactive and proactive categories.
- None: Segments that satisfy neither the reactive nor proactive categories.

These designations were made for both the all modes and VRU modes analyses, resulting in a set of HIN maps for each municipality. Maps were developed for both the all modes and VRU modes results, as well as a combination of both in a single map.

# **Appendix E: Project Engagement Summary and Stakeholder List**

## **Newport Stakeholders**

#### **Municipal Stakeholders**

- Planning & Economic Development Department
- Patricia Reynolds, Director, Planning & Economic Development
- Rebeccah Trefethen, City Planner, Department of Planning & Development
- Hayden McDermott, Assistant Planner, Department of Planning & Development
- Keiry Lopez, Community Liaison
- Newport City Council
- Charles Holder, Chair & Mayor
- Lynn Underwood Ceglie, Vice Chair
- Xay Khamsyvoravong
- Jeanne Marie Napolitano
- Stephanie Smyth
- Ellen Pinnock
- David Carlin III

#### **External Stakeholders**

- Aguidneck Land Trust
- Paige Myatt, Director of Climate Resilience
- Grow Smart RI
- John Flaherty, former Deputy Director
- Bike Newport
- Bari Freeman, Executive Director
- Rhode Island Bike Coalition (RIBike)
- Betty Bourret, Interim Director
- Naval Station (NAVSTA) Newport
- Cornelia Mueller, Community Planning Liaison Officer

### **Engagement Summaries**

A summary of key findings from public engagement events for RIPTA Safe Streets for All. Events are summarized by event, intro street specific feedback and more general statements. Each comment on a particular street or theme represents a different participant.

#### **Broadway Street Fair (Newport)**

Date: 10/12/2024

Location: Newport, Rhode Island – Broadway Street at Bike Newport Booth

**Overall Summary**: Saturday midday (11am-4pm), community wide event including tourists, families, singles, bikers, hyper local people (who lived off Broadway St), and many local vendors/business owners. Attendees from all over Aquidneck island. People drawn to the table were interested by the traffic safety signage, the Bike Newport information, or had children who wanted snacks. Walking around the fair and asking vendors their opinions was a very effective tactic in getting more in-depth conversations with locals. Generally, people were really grateful we were doing the survey at all and supportive of the prospect of a Traffic Safety Plan, feeling it is needed on the island. Most people brought up East and West Main and many people talked about a specific extents of E Main or cut through that was pivotal to allowing bikers to "ride the whole island."

Approximate Engagement: +50

#### **Street Specific Feedback**

#### <u>Middletown</u>

- East Main Road
  - Riding bikes doesn't feel comfortable, especially from Clement's Marketplace to the polo fields
  - Could use a bike route from Sandy Point Ave to Glen Road so that it would be possible to go
    from the beaches to Union St and Middle Rd on a bike
  - One person expressed they were concerned that a Road diet on East Main would make it impossible for a car to pass "that person that just wants to go 25 mph the whole way" and that would "back up traffic"
  - Needs dedicated, safe bike lanes and complete sidewalks along the whole way
  - Posted police officers have a positive effect on speeding (people slow down) but if a police officer is not there the speeds go back up
  - No sidewalk, no options other than to ride or walk in traffic
  - O Wish people were able to ride bikes on E Main & W Main
  - Variable speed limit; people drive too fast
  - No sidewalks
  - Wish there were more dedicated bike lanes
- West Main Rd
  - Speeding is an issue, needs dedicated bike lanes and sidewalks
  - No sidewalk, no options other than to ride or walk in traffic
  - o Will ride backroads to avoid using a scooter on this road
  - People travel 45 mph in 25 mph zones

- Wish there were more dedicated bike lanes
- Purgatory
  - People travelling around First Beach need a place to turnaround and the intersections are confusing, a roundabout was suggested to improve the intersection safety and allow the turnaround movement that is needed
- Turner St & Wyatt St
  - Cars go too fast
- Sunset Street & Hillside Street
  - People drive too fast, there are a lot of kids nearby. Once needed to call RIPTA because the bus was going too fast and hit a sign twice.

#### **Newport**

- Broadway
  - Used as a cut through to the highway, people don't come to complete stops
  - Need to park on the sidewalk for loading and unloading; dedicated loading zones and enforcement of parking would be helpful
  - People drive too fast down Broadway
  - Wish it was two lanes with a center turn lane
- Thames St
  - Too narrow for cars and bikes
  - A lot of pedestrians in the roadway
- Prospect Hill Street
  - o Too narrow and fast because of cut-through traffic despite sidewalks
- Green St
  - Side streets that feed Memorial feel like people are speeding and pulling out onto Memorial too quickly
- John Street
  - People use John St as a cut-through to avoid lights on Bellevue and Memorial Blvd, cut-through drivers are driving too fast and it doesn't feel safe despite sidewalks
- America's Cup
  - Delivery trucks with sidewalks and bike traffic "get squeezed" between Bannister's wharf and the hotel
- Not enough accommodation for delivery vehicles on America's Cup
  - There are crosswalks without stoplights and no one is yielding to pedestrians wish there was a stoplight or more protection
- Spring St

- Narrow for all the uses and traffic volumes (bikes and cars)
- "needs a bike lane" is too tight currently for cars and bikes, has been suggested but plans for improvement have been cancelled due to side street parking concerns
- o People on the side streets turning onto Spring Street do not stop; call it the 'Spring Street Roll'
- By the Spring and Bull St intersection can never see cars coming as a pedestrian that walks to work every day
- Wish there was a bike path

#### Gibbs Ave

- From Broadway to Kay St, there's parking on both sides but not enough room for bikers and cars going both ways
- No one stops at stop signs, especially on the reservoir side

#### Rhode Island Ave

Used as a cut-through, problems with people speeding and conflicts with pedestrians

#### Malbone Rd

- Not safe on a bike, park intersection unsafe
- JT Connell Highway Roundabout
  - Crossing as a pedestrian is difficult because vehicles do not yield at the crossings is ugly and needs a crosswalk

#### Ocean Drive

- Wish could bike down Ocean Drive safely; not enough of a shoulder and people drive really quickly around the corners and curves
- Green End Avenue & Miantonomi Avenue
  - There is a "Dangerous Intersection" sign; it's hard to see people

#### Bellevue Avenue

- Wish able to bike from downtown to Touro Park and the mansions and Fort Adams
- Wish the sidewalk was improved; currently it's crumbling asphalt
- Great place for a bike path

#### Avrult St

o Parking on both sides of the street and a curve, bad sight distance

#### Burman Road

Wish the existing bike path were longer

#### Portsmouth

#### West Main

Intersection with Union, there's a left-hand turn at the light from West Main onto Union which
feels unsafe as it is a skewed intersection, it is confusing and scary for both peds and drivers and
accidents have been known to happen there.

#### Anthony Road

To Mello's Farm/Boyds Lane "is scary" on a bike

#### Redwood Road

 Feels safe for biking, therefore if there was a cut through for bike's to Burma Rd (a off-road pathway), you "could bike the whole island"

#### **General Statements**

#### Sidewalks

People desire better maintenance of sidewalks

#### Biking

- o People talking about biking were very focused on how to make the whole island bikeable
- Bike lanes along roads near the beach have too much sand in them to feel safe biking ("a
  traditional bike or a moped") so even if there is a bike lane, it doesn't feel safe to use it
- Wish there were more raised bike lanes without taking sidewalk away
- Wish there were bike paths by the water

#### Public Transportation

- People started by saying how there "just so many more cars/people than there used to be" and then they would ask if there was a way to incentivize people leaving their car behind, a shuttle, or more frequent train routes so that tourist could get onto the island without their cars.
- Another, mentioned wanting for preferential treatment for island residents for community funded events based on license plates/residential status
- Coleen thought: if free/reduced parking is provided for residents at events, that could further encourage tourists to use alternate forms of transportation to get to island events

#### Driver behavior

 People are driving too fast, not coming to complete stops, and pulling out in front of traffic at bad times

#### Rotary

 One person shared that they feel "People don't know how to drive in the rotary and I almost got squished" (as a vehicle)

#### Crossings/Intersection

- o "The Marriot intersection is nuts" walking and driving feels unsafe
- o Rhode Island Ave and K Street intersection -> is skewed and feels unsafe as a pedestrian
- The Touro and Spring St intersection is confusingly marked and crosswalks need to be improved, a bus apparently got stuck here

#### Vehicle Parking

- Wish there was more residential specific parking and parking restrictions
- Cruise ships cause issues

- Wish there was more satellite parking so that there was less parking downtown; park and rides and bus services from parking lots/decks on outside of downtown area
- Bicycle Parking
  - Need more bike racks everywhere
  - o Would love bicycle parking at the train station
- Lane width & # of lanes on streets
  - o Some street shouldn't be two lanes; can take away a lane and add bicycle facility
- Parks
  - O Wish could bike/walk to major parks like Miantonomi Park
- Bicycle Rule of the Road
  - Need more enforcement for bicyclists running red lights

#### **Team Insights**

 Tourists and locals alike were impressed and hopeful about the existing bikeability and how close the island is to being completely bikeable

#### **Newport Film**

Date: 7/18/24

Location: Aguidneck Park, Newport, Rhode Island

**Overall Summary**: Well-attended event. Primarily approached attendees and asked them to take the survey. As the survey was down, team members talked to asked questions about what they found to be important.

**Approximate Engagement**: +30

#### **Street Specific Feedback**

- East Main Road
  - Speeding
- Bellevue
  - Would like to see more rounded, pole mounted mirrors, particularly in the sharp corner by the southern extent of the street
- Washington Bridge
  - Participant finds it to be generally unsafe
- Tuckerman Ave
  - Participant is a part-time resident who is unhappy with roads being repaved (unneeded);
     concerned with how taxpayer money is used; doesn't think transportation safety is a priority
- Valley Road

- Participant would like to see improved sidewalks between West/East Main Roads; more connectivity of sidewalks so can get to places; see people with strollers, dogs walking on grass or road and it's not safe
- Common Fence Point (Portsmouth)
  - o Want to see more sidewalks in neighborhood
- Highland Road (Tiverton)
  - Could be a one way road with a bike lane, more lights. Currently a narrow, poorly lit residential road, lots of people walking their dogs.

#### **General Statements**

#### Tourism

- o Participant finds the small novelty cars that can be rented to be unsafe
- Participant hates the motorized scooters
- Visiting participant wishes for more local trolley stops in Newport
- More bike paths to protect tourists
- Tourists have a "lack of spatial awareness"

#### Multimodality

- Participant finds bicycles to be stressful because they might not have experience biking locally, and generally does not like when cyclists are in the road
- Nervous when bikes are in the sidewalks
- Desire for more bike lanes and sidewalks
- Does not like center bike lanes, thinks there should be more bike lanes, and for those that exist to be more clearly and safely defined
- Participant wants more bike lanes and sidewalks
- Participant (retired couple) would love to see better connected bike paths that are maintained vear
- Participant would like to see transit routes made more efficient with fewer transfers, a connection to the airport (thinks improved transit is important for bicycle and pedestrian use)
- Competition for space on the roads between modes
- o Participant has noticed the ghost bikes and thinks it is a shame
- (Little Compton) Participant says there are no sidewalks here, and thinks it would be scary to walk

#### Speeding

- o Participant (late teens/early twenties) does not like driving in Rhode Island at all,
- o "Everyone is always in a rush."
- "The five minutes you're going to save is not worth the ten people you're going to kill."

#### Behavior

- o Participant concerned about increasing number of vehicles who change lanes with no turn signal
- Would like to see improved, more frequent driver education

#### **Team Insights**

- Participants were most frequently concerned with interactions between bicycles, pedestrians, and motor vehicles.
- Tourists on rented bikes, mopeds, and mini-cars were cited as behaving dangerously.
- Participants were more concerned with the development of new bicycle and pedestrian infrastructure than at other events.

## **Focus Group Notes**

#### February 28, 2025

#### Re: Aquidneck Island Bicycle Network Focus Groups

#### **Conexion Latina Participants**

- Ride Island Project Team: Bari Freeman (Bike Newport), Shawna Kitzman (Toole Design), and John Flaherty (Grow Smart Rhode Island)
- Lead: Rebekah Gomez, Executive Director of Conexion Latina

This Focus Group is the first known organized conversation with Newport's predominant Spanish speakers who rely on bicycles for transport. Many participants do not speak or understand English, and the interpretation of the conversation was kindly provided by Conexion Latina staff.

#### **Dialogue**

This community's input is very valuable to the discussion of Aquidneck Island's bicycle infrastructure and policy.

#### **General Feedback:**

- Newport is generally a welcoming and peaceful community.
- Why ride (fun, transport, exercise, other)?
  - o Commute to one or more jobs (many in hospitality and food service)
  - o Errands such as trips to the supermarket or health care
  - Daily activities such as spending time with family
- When do you prefer to ride?
  - Many bike approximately 5 days per week, over week days and weekends.
  - o In the summer, they're more likely to bike 7 days per week.
  - o In the winter, they ride less, due to falling risks related to cold temperatures, ice, and snow.
  - Commute times (many have multiple jobs):
    - ✓ 8am and 10pm
    - ✓ 9am to 3am
    - ✓ 9am to 4 pm to 11pm
- Given the option, many participants would ride their bikes more. Many do not own a car.
- What solutions would improve biking on Aquidneck?
  - Improve driver awareness of and adequate space for bicyclists. Some drivers do not respect
    cyclists, and bicycle crashes are often due to the lack of driver attention and caution. This
    contributes to parents preventing their children or teens from riding bikes.
  - Improve bicycle infrastructure (i.e. bike lanes) on major roadways and roundabouts.
    - ✓ Broadway (especially near Newport Hospital)
    - ✓ Van Zandt Street
    - ✓ East and West Main Road
    - ✓ Admiral Kalbfus, including the roundabout
    - ✓ Warner Street

- Increase the number and quality of streetlights.
- There is a need to ride bikes on the sidewalk of West Main Road. Bari clarified that the Middletown government allows sidewalk riding, however Newport officials will ticket. Only youth under age 13 can ride on the sidewalk.
- Increase roadway and trail lighting. There is a fear with walking or riding in poorly lit areas.
   Often, bicyclists will dismount and walk their bikes out of concern for personal safety.
- Improve wayfinding signage.
- o Increase secure bicycle storage at workplaces and residential areas (bicycles are often stolen due to high demand, especially in the summer).

#### February 28, 2025

#### Re: Aquidneck Island Bicycle Network Focus Groups

#### **HEZ Community Group Participants**

Nycole, Shanette, Phyllis, Cynthia, Nat, and Ms. Pauline

#### Dialogue

- Why ride (fun, transport, exercise, other)?
  - All three
  - Exercise and freedom
  - o Enjoyment and as a commute mode when car's getting fixed at mechanic
- When do you prefer to ride?
  - Spring or summer
- Do you have access to other modes?
  - I don't want a car
  - o Respondents take a mix of public transit, private car, Lyft, or walk
- What barriers prevent you from riding more than you want?
  - Lack of bicycling accommodations, including storage at home and destinations
  - o Lack of safe riding lane or sidewalk to ride on along West Main
- What solutions would improve biking on Aquidneck?
  - o More and wider bike lanes (specifically on Girard Ave, Malbone Rd)
  - Connect entire island with safe passages
  - To reduce traffic congestion and increase roadway safety, invest in tourism-focused alternatives to driving, such as increasing bike infrastructure and advertising bike rentals at hotels and other tourism destinations; improve transit service and frequency
  - Key destinations include Fort Adams, King's Park, Rogers School, EVERYWHERE!

#### February 28, 2025

#### **Re: Aquidneck Island Bicycle Network Focus Groups**

#### **Fab Newport Student Participants**

- Students: Diego Gomez, Marvin Cruz, Diego Lopez, Dima Rojas, Ian Marchand, Lucas Robinson, Mary Ellen Williams, Georgia (last name uncertain), and Angel Nunez
- Fab Newport Lead: Chris Gross
- Bike Newport Support: Marissa Caito and Maria Figueras

#### **Dialogue**

- Why ride (fun, transport, exercise, other)?
  - o Fun
  - Transport to destinations, such as school, the library, parks, or convenience stores
- When do you prefer to ride?
  - o Summer, or when the weather is nice
  - Two participants indicate they ride to school. Out of several hundred students at their school, only a couple bikes are usually in the bike rack
  - A couple do not ride much or at all, but are interns at Bike Newport. One identifies as "an indoor person".
- What routes do you prefer to take?
  - o Some ride on sidewalks, although they understand it may be illegal
  - o Back roads are preferred over main roads
- Do you have access to other modes?
  - Most participants get rides from family or friends
  - o Walk
  - o Take RIPTA
- What solutions would improve biking on Aquidneck?
  - West Main Road has no shoulder and doesn't feel safe
  - Bike is in storage at home (multi-unit), and not easily accessible; some students lack a safe and secure place to store a bike at home.
  - Lack of protected bike lanes with fast cars does not feel comfortable

# **Transportation Safety Summit**

**Aquidneck Island Municipalities** 

Representatives of Aquidneck Island municipalities, regional organizations, and advocacy groups convene at the Transportation Safety Summit

Subject: Summary of the Transportation Safety Summit

Location: Middletown, RI

Date: Tuesday, October 22, 2024

#### Attendees:

Shawna Kitzman: Senior Planner, Toole Design (Host)

Quinn Molloy: Project Planner, Toole Design (Host)

Salma Haoudi: Project Planner, Toole Design (Host)

Perri Sheinbaum: Project Planner, Toole Design (Host)

Aaron Lindo: Assistant Planner, Town of Portsmouth

Lori Turner: Healthy Communities Coordinator, Town of Middletown

Rebeccah Trefethen: City Planner, City of Newport

Hayden McDermott: Assistant Planner, City of Newport

Tom Welch: Town Council Vice President, Town of Middletown

Gary Crosby: Retired Planner, Town of Portsmouth

Anita Guo: Principal Planner, Town of Middletown

Betty Bourret: Interim Director, RI Bike Coalition

Katie Lopez: Community Liaison, City of Newport

Lea Hitchen: Town Planner, Town of Portsmouth

Paige Myatt: Director of Climate Resilience, Aquidneck Land Trust

Robert Hanley: DPW Director, Town of Middletown

The following is a summary of the insights and feedback gathered during the Transportation Safety Summit from representatives of Aquidneck Island municipalities, the Aquidneck Land Trust, and the Rhode Island Bike Coalition advocacy group.

The organizing team kicked off the workshop by presenting the core principles of Vision Zero, ensuring that all participants, regardless of their background, had a solid understanding of this key concept. Next, an icebreaker activity helped participants connect and become familiar with one another before diving into discussion and idea sharing.

Participants formed two diverse groups, each thoughtfully composed with representatives from different organizations and municipalities to foster varied discussions. The groups rotated through two-themed stations: one focused on Safer Streets and Safer Vehicles and Speeds; the other focused on Safer People and Post-Crash Care & Data Transparency. At the conclusion of each theme discussion, participants voted on two or three preferred strategies per theme. To ensure unbiased insights, the organizing team covered prior group responses before the next group arrived.

The four key themes discussed—Safer Streets, Safer Vehicles and Speeds, Safer People, and Post-Crash Care & Data Transparency— were all reflective of the five Vision Zero components. The following sections reflect the feedback and input from the activities.

#### Theme 1: Safer Streets

Improving street infrastructure involves finding the right balance between design, functionality, and safety. While stakeholders expressed strong support for design strategies that enhance street safety, they also raised concerns about potential visual clutter and the challenges posed by limited space. Among the strategies discussed, the following emerged as top priorities:

- Develop a street design guide based on best practices.
- Focus on infrastructure safety improvements in areas with the greatest need.
- Separate pedestrians and bicyclists from vehicles with protected bike lanes, accessible sidewalks, and safer intersections.
- Test "quick-build" solutions for temporary evaluation, such as speed bumps.

#### **Key Discussion Points and Insights:**

#### Concerns or doubts about...

- Raised crosswalks not serving as effective visual cues and potentially causing confusion for drivers and pedestrians.
- Hedges and other landscaping features obstructing visibility and posing safety risks for road users.
- Drivers failing to fully stop at stop signs, creating safety risks by rolling through intersections.
- Adding protected bike lanes on existing streets, due to limited right-of-way as a significant barrier on key corridors.
- Installing crosswalks at every transit stop, with suggestions to limit crosswalks on East and West Main roads to maintain smoother traffic flow.
- Sign clutter, as too many signs can overwhelm drivers and reduce their effectiveness.

#### Support for...

- More bus shelters to improve the experience for transit users and encourage public transportation.
- Pedestrian signage and Rectangular Rapid Flashing Beacons (RRFBs).

#### Challenges around...

 Historic properties, where the boundaries between public roads and private property are often unclear, complicating the allocation of space for transportation infrastructure.

#### Discussion of...

- Newport's minimal use of slip lanes, with only one located near City Hall.
- Safety risks at intersections where pedestrians and vehicles receive green signals simultaneously, increasing the potential for conflicts.

#### Theme 2: Safer Vehicles and Speeds

Discussions led to a strong consensus among participants on the need to reduce speeds across ALL neighborhoods to promote safer environments. Participants explored strategies for managing vehicle fleets and enforcing speed limits through cameras. Key priorities that emerged included:

- Install traffic-calming features, such as speed humps and narrower lanes.
- Create neighborhood zones with 15 mph limits and adjusting speed limits by location—Set 20 mph in residential areas and 25 mph on larger roads.

#### Key discussion points and insights:

#### Concerns or doubts about...

Pursuing changes to driver's education programs, viewing them as the responsibility of the state.

#### Support for...

- Enhanced bike, pedestrian, and transit infrastructure, as well as shared micromobility solutions, and infrastructure improvements to support these initiatives.
- Shuttle lots and local bus circulators as potential solutions to improve mobility on the island.
- E-bike users to display special identification, such as a red rear light, to distinguish them from traditional bicycles, as drivers may misjudge the speed of faster-moving e-bikes.
- Implementation of a "dummy speed camera" to raise awareness, ensuring compliance with state regulations requiring signage and advance warning, and promoting the initiative through local
- Lower speed limits across entire neighborhoods, rather than individual streets.

#### Challenges around...

Gathering the necessary political support.

#### Discussion of...

- Families for Safe Streets, with detailed insights shared about the program's structure, popularity, and how it has expanded to other communities.
- Informal local education efforts, such as high school programs and development roles through CCRI's Lincoln campus, including the student driver liaison program. Although these programs may not impact tourists, they could foster a culture of safety among younger drivers on the island.
- Implementation of local training initiatives with a dedicated coordinator, and carefully integrating these efforts into the school system.
- Presence of an SRTS program in Newport, with the possibility that it may have been initiated by public works.
- Creation of 15 mph neighborhood zones and adjusting speed limits based on location— with strong support for the 15 mph throughout the town residential neighborhoods and removal of the qualifier "especially in areas with many walkers and cyclists,"

#### **Theme 3: Safer People**

Human behavior plays a pivotal role in transportation safety, and education emerged as a key focus area during the discussion. Participants emphasized the need to shift cultural norms surrounding mobility through initiatives like defensive driving courses and community awareness campaigns. The following strategies arose as the top participant priorities for a safer transportation culture:

- Develop a Safe Routes to School program.
- Promote safer transportation options through bike-sharing, e-scooter programs, and encouraging walking, biking, and transit.
- Mandate defensive driving and road safety courses for new drivers, including training on alternative travel modes (e.g., biking, transit, and walking).

#### Key discussion points and insights:

#### Concerns or doubts about...

 Driver's education programs which often fail to teach students how to interact safely with other modes of transportation, such as bicyclists and pedestrians.

Support for...

 "Build it and they will come" approach as people are unlikely to adopt biking or other alternative modes of transportation without adequate infrastructure to support safe travel.

#### Challenges around...

- Political barriers to implementing new transportation programs and policies.
- Carpooling initiatives, given the town's predominantly high-income population, which may prefer individual transportation options.

#### Discussion of...

Newport's existing Safe Routes to School program.

#### Theme 4: Post-Crash Care & Data Transparency

Enhancing post-crash care and improving transparency around crash data are critical steps toward building trust, accountability, and public safety. Participants emphasized the importance of creating better data-sharing platforms and fostering stronger coordination among emergency services. The following strategies were identified as priorities for this theme:

- Develop local crash data infrastructure for sharing.
- Standardize crash data collection and reporting and share anonymized data online in a user-friendly format.
- Compare traffic data before and after traffic calming interventions to evaluate effectiveness and guide future applications.

#### Key discussion points and insights:

#### Concerns or doubts about...

 Specific processes for accessing mental health services available for first responders exposed to traumatic events.

#### Support for...

- Completion of the 2019 data transparency initiative that RIDOT initially planned but did not follow through on.
- Establishment of policy infrastructure to develop a crash data dashboard for Aquidneck Island.
- Creation of an online platform for public access to crash data (island-wide crash data system) to improve transparency and public awareness.

#### Challenges around...

Rhode Island's lack of publicly available crash data, noting that RIDOT's reluctance to release data may be driven by concerns over potential lawsuits.

#### Discussion of...

- High number of crashes occurring on East Main Street and Broadway.
- Oakland's success in demonstrating that emergency vehicles can navigate streets with separated hike lanes
- Establishing policy infrastructure to develop a crash data dashboard for Aguidneck Island.

# List of Themes and Preferred Strategies (most preferred at the top)

| Safer Streets  Make infrastructure safety improvements in areas with the greatest need.  7 Separate pedestrians and bicyclists from cars with protected bike lanes, accessible sidewalks and safer intersections.  Test "quick build" solutions for temporary evaluation and data collection.  Test quick build" solutions for temporary evaluation and data collection.
